Estate Centric

Step-by-Step CRM User Guide

A complete real-estate guide: leads, visits, projects and inventory, allotments, collections, commissions, listings, property management, reports, settings, and security.

Guide at a glance	What you will learn
Audience	Sales teams, property teams, managers, and workspace administrators
Core workflow	Capture -> assign -> follow up -> visit -> offer -> booking -> collections
Admin focus	Users, invites, roles, permissions, plans, integrations, and backups

Version 2.0 | November 2026

1. Quick start

Estate Centric is organized around a simple sales and property workflow. Start with the steps below before exploring advanced setup.

- Sign in. Use your workspace email and password. If your administrator sends an invite, open the one-time link and create your password first.

- Set your profile. Open your profile/avatar area and confirm your name, phone, password, and two-factor method.

- Learn your scope. Your role controls which leads, contacts, reports, and actions you can see. If something is missing, ask an administrator to check your role and branch/team.

- Work from the lead record. Every call, note, follow-up, visit, offer, and booking should be recorded on the lead timeline.

Recommended first-day checklist

Task	Owner	Done when...
Confirm phone and profile	Every user	Your contact details are correct
Review assigned leads	Agent / counsellor	Each open lead has a next action
Check dashboard and reports	Team lead / manager	You know today's overdue and SLA items
Invite teammates	Admin	Each teammate has a role, team, branch, and invite link

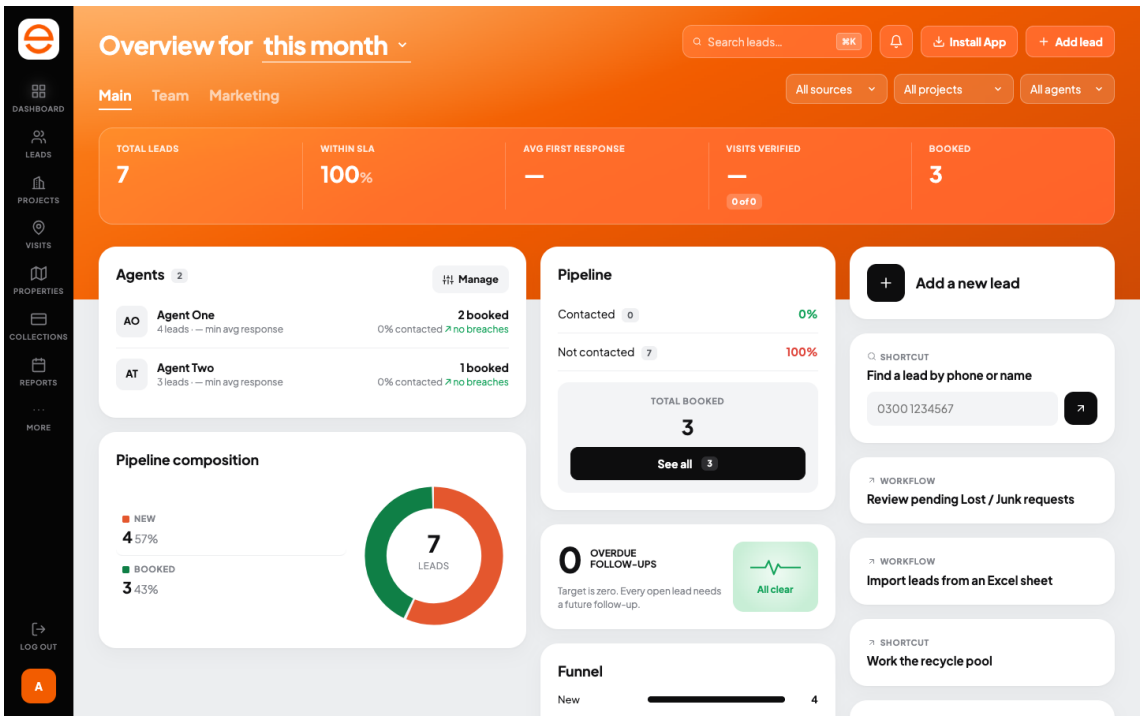

Important: Estate Centric records business activity for accountability. Keep statuses, notes, follow-up dates, and ownership up to date.

Step-by-step user guide

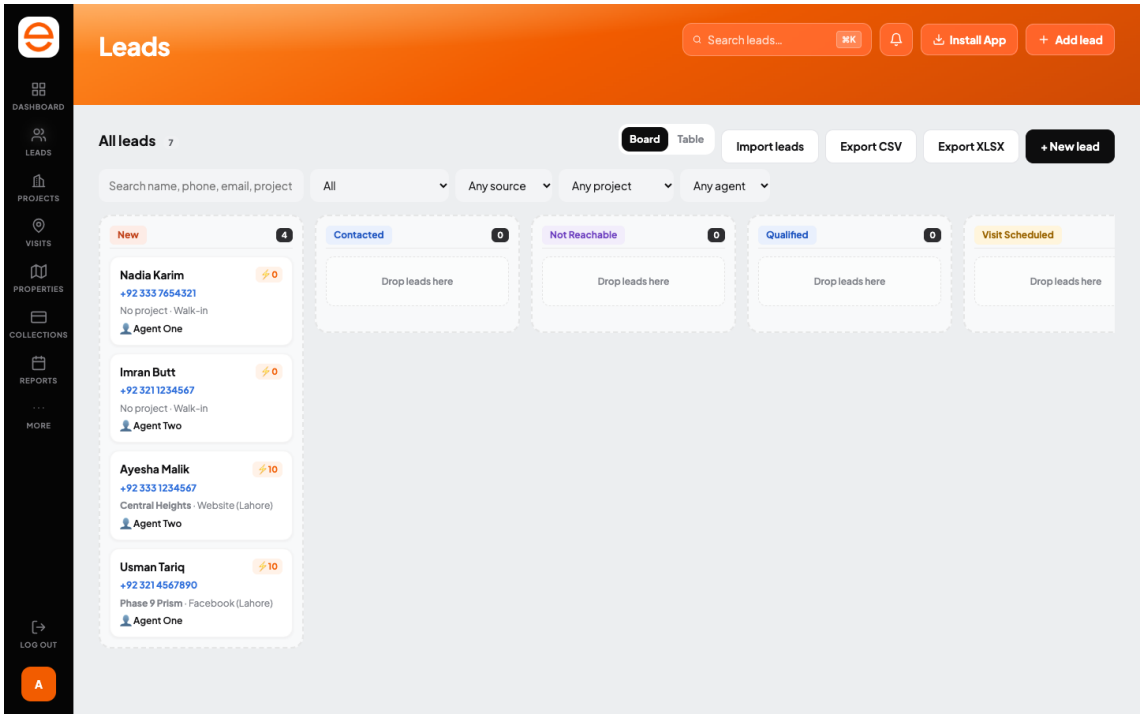

Follow these workflows in order. The labels match the main navigation and buttons in the application.

1. Daily lead workflow

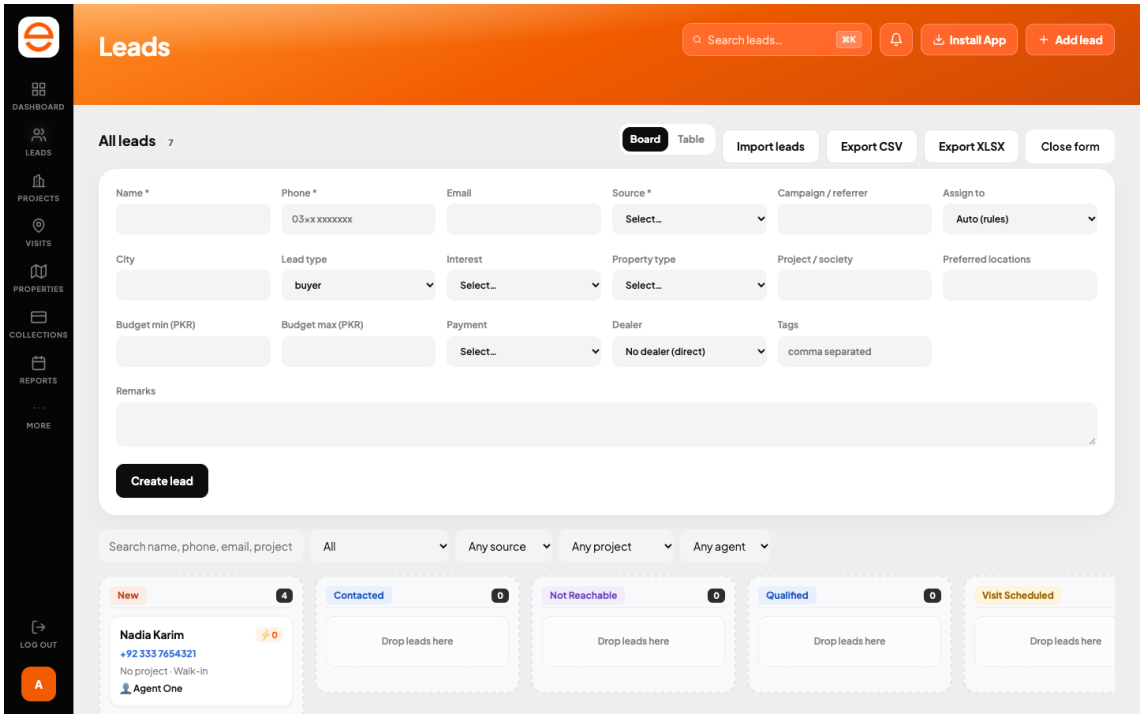

Step	Action	Check before moving on
1	Open Dashboard and review new, overdue, and unassigned leads.	No urgent lead is missed.
2	Open Leads and search by name, phone, email, or project before creating a record.	No duplicate contact exists.
3	Create or open the lead and complete name, phone, source, project, budget, and type.	Required details are complete.
4	Assign the lead to the correct owner, team, and branch.	An owner is visible.
5	Log the call, WhatsApp, email, or visit outcome and set the next follow-up date.	Timeline has an activity and next action.
6	Move the lead through Contacted, Qualified, Visit Scheduled, Negotiation, and Booked or Lost.	Status matches the real conversation.
7	At day end, open Reports or Users > Performance and review leads, calls, visits, bookings, and overdue work.	No open lead is left without a next step.

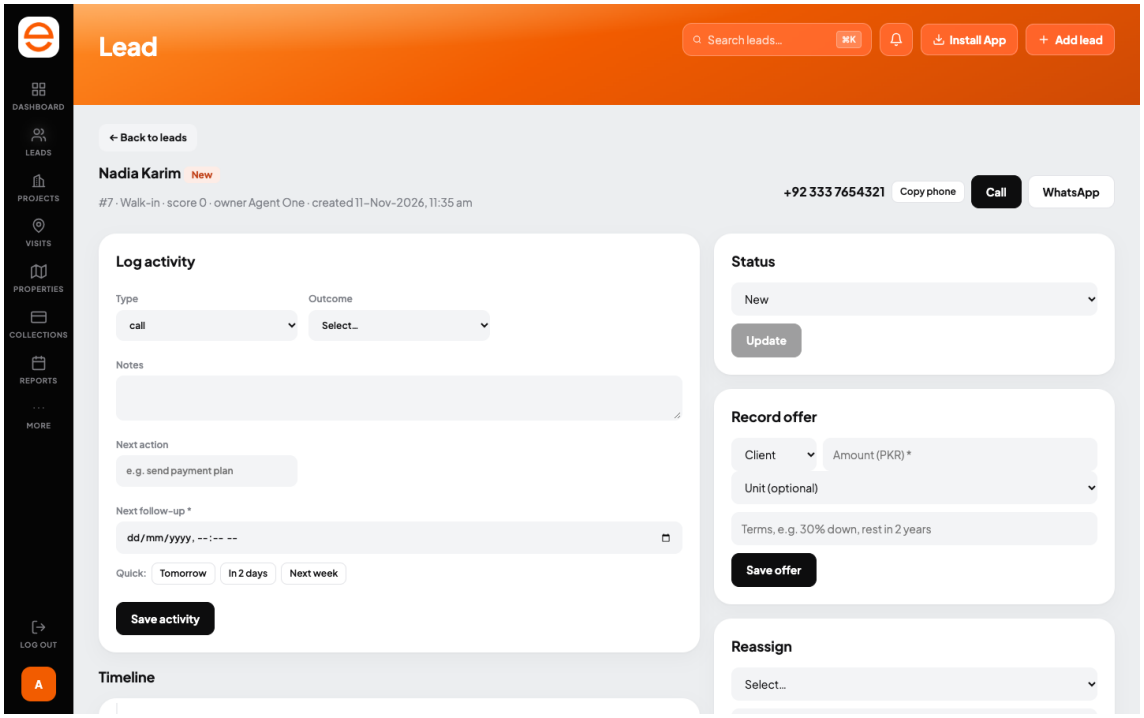

Screen: Dashboard: start the day with KPIs, overdue and unassigned leads.

Screen: Leads: board view with filters, import and export.

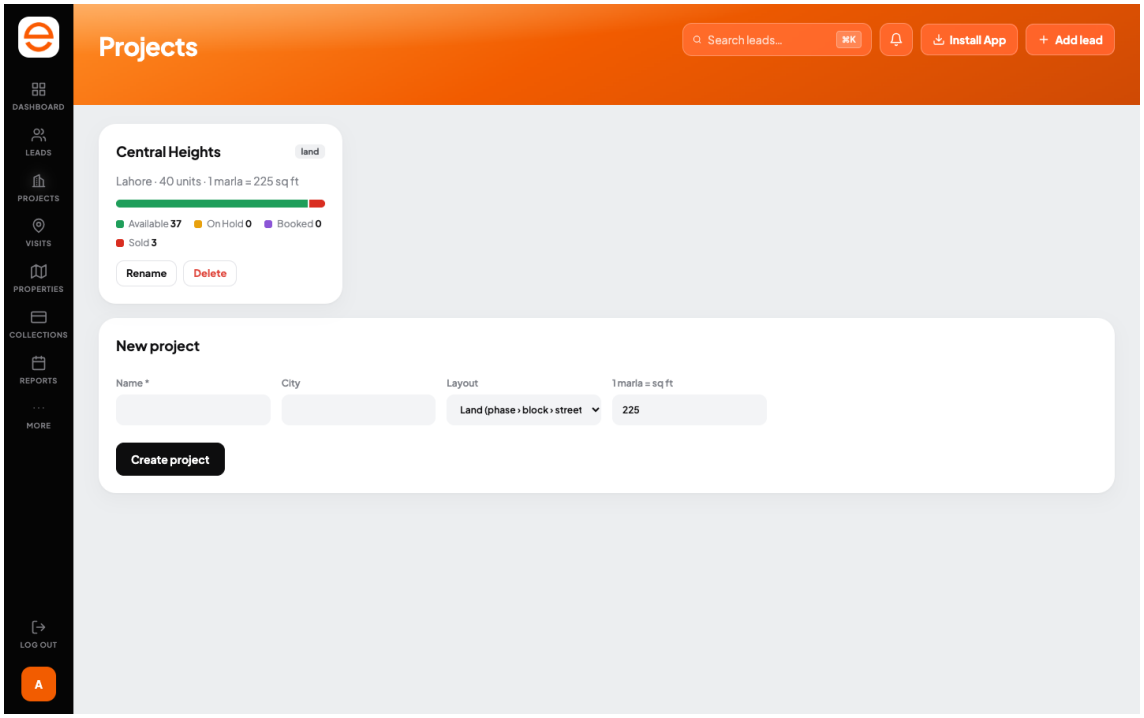

Screen: New lead form: name, phone, source, project, budget and assignment.

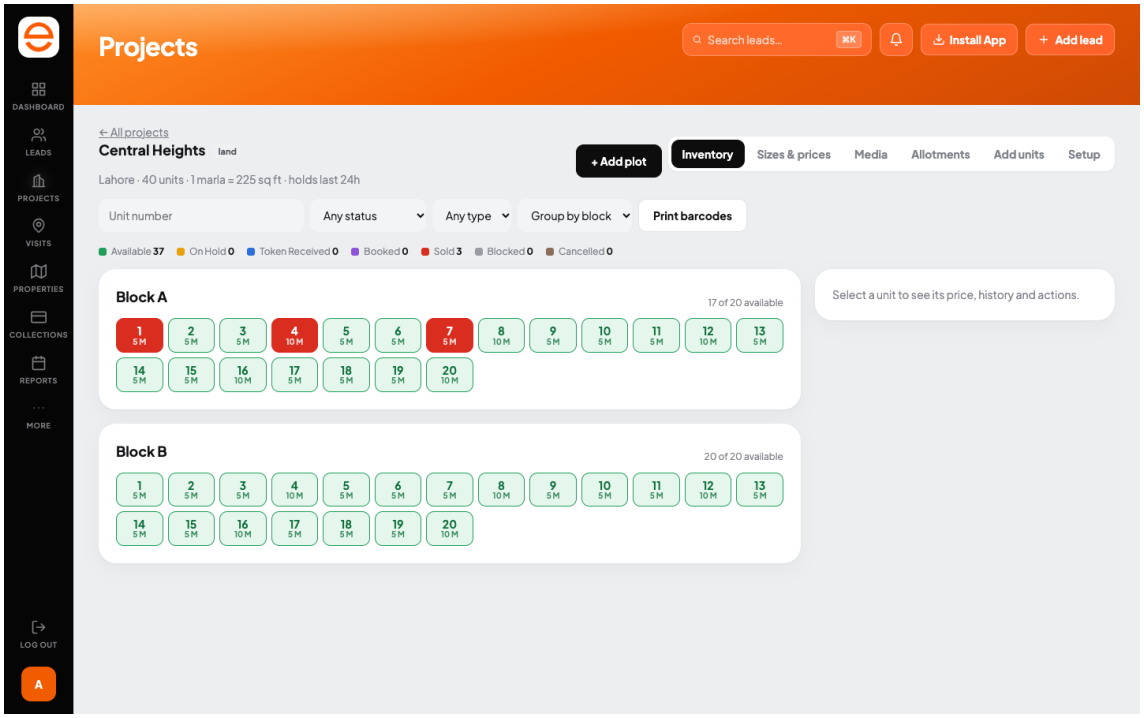

Screen: Lead detail: log activity, change status, record offers and see the timeline.

2. Property and project workflow

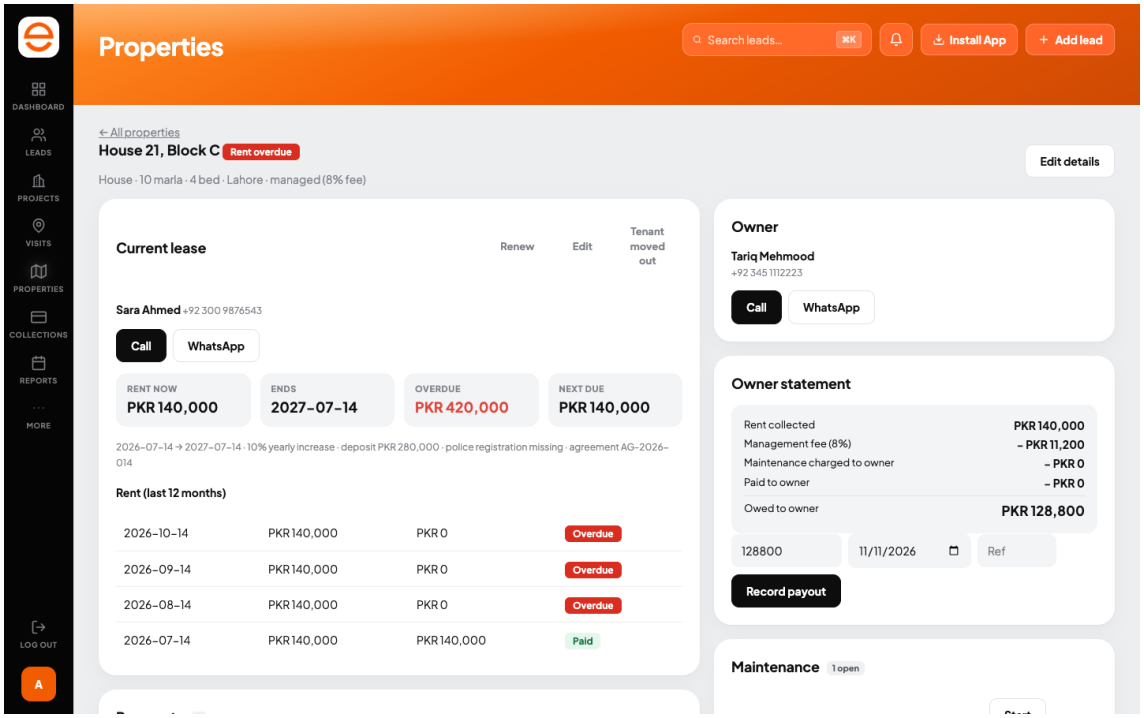

Step	Action	Check before moving on
1	Open Projects or Properties and select the correct project, society, or property.	You are working in the right workspace scope.
2	Add or update the record with title, location, type, price, status, owner, and supporting files.	The record is complete and saved.
3	For a society map, upload the plan, remove white background if needed, adjust or fit the map, and save.	The map stays aligned when zooming.
4	Use Redraw boundary or Match points only when the visible boundary needs correction.	The boundary follows the approved plan.
5	Link the project or property to relevant leads and continue follow-up from the lead timeline.	The sales context is connected.

Screen: Projects: pick the project you are working in.

Screen: Inventory grid: colour-coded unit status by block.

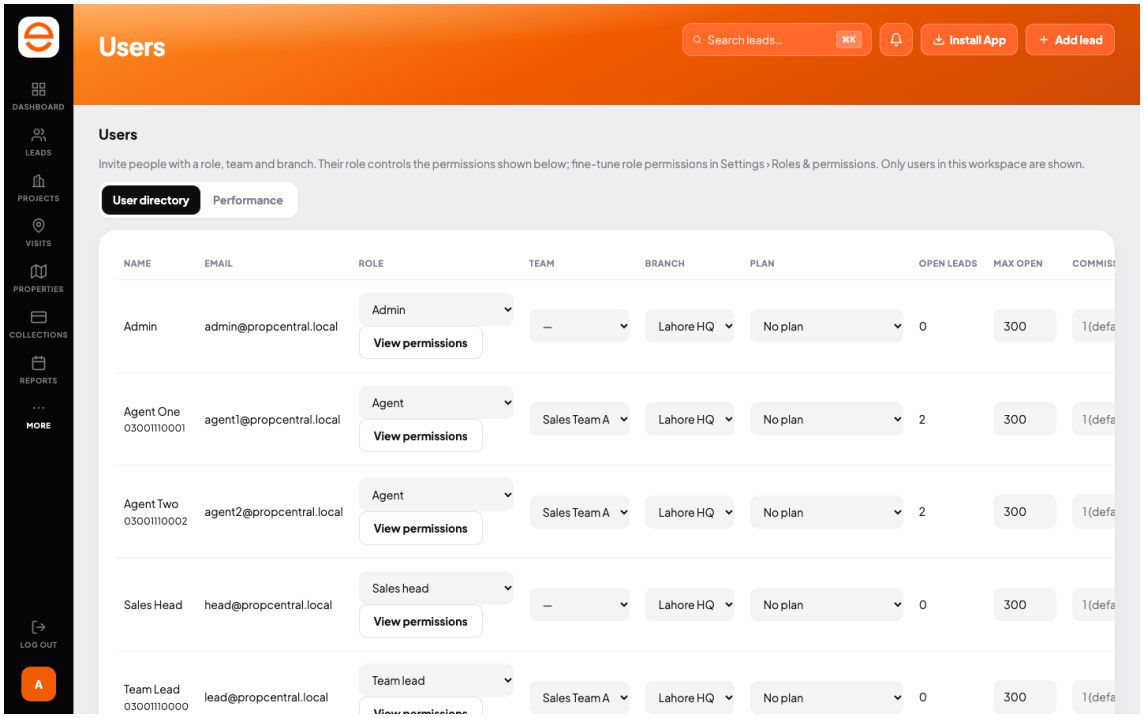

Screen: Property page: owner, tenant, lease, owner statement and maintenance.

Step-by-step: administration and reporting

Administrators use these workflows to keep access, ownership, imports, and performance reporting accurate.

3. Invite a user and set permissions

Step	Action	Check before moving on
1	Open Users from the administration area and choose Invite user or Create account.	The invitation form is open.
2	Enter the user name and email, then choose the role, branch, team, and account scope.	The user is assigned to the correct account.
3	Set permissions for leads, projects, properties, reports, settings, and map editing.	Access follows the user's job.
4	Send the invite link and ask the user to create a password from the one-time link.	The user can sign in.
5	Return to Users and confirm the user is active, correctly scoped, and not an administrator by mistake.	Role and account ownership are correct.

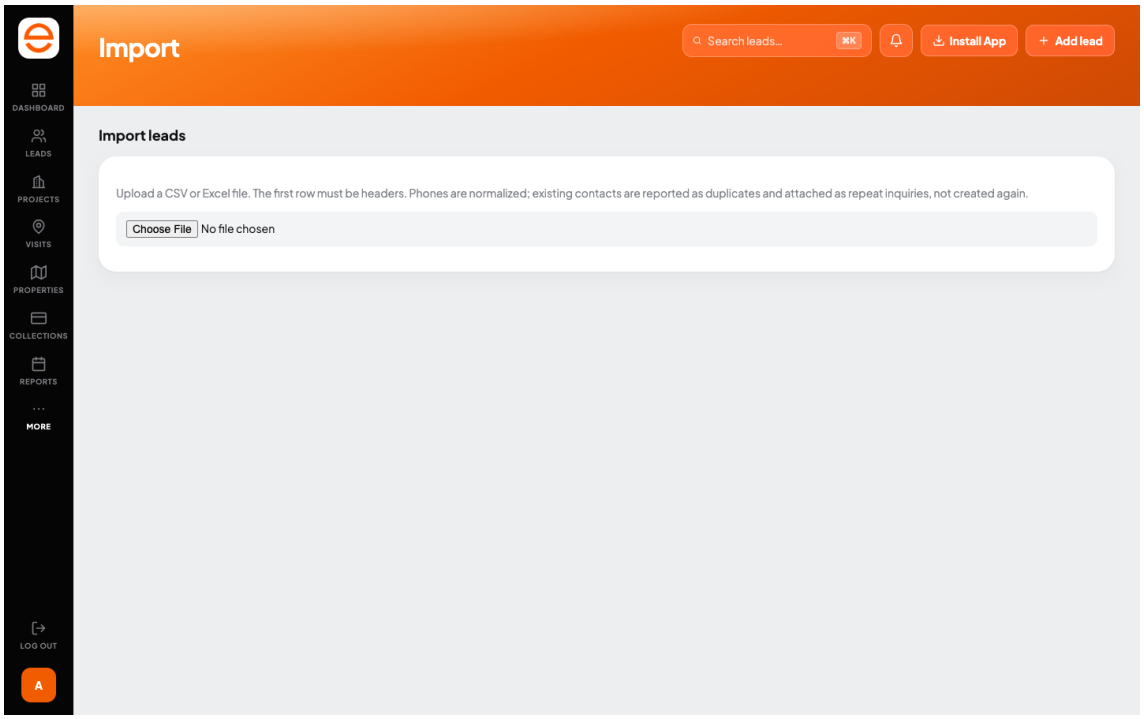

Screen: Users: roles, teams, branches and plans for each account.

4. Import and export leads

Step	Action	Check before moving on
1	Open Leads and choose Export to download the current filtered or full lead list.	The CSV or XLSX file opens with column headers.
2	Prepare an import file with one lead per row. Keep headers such as name, phone, email, source, project, status, owner, and notes.	Columns use consistent names and formats.
3	Choose Import and upload CSV or XLSX. Review the preview and map any unmatched columns.	The preview shows the expected number of rows.

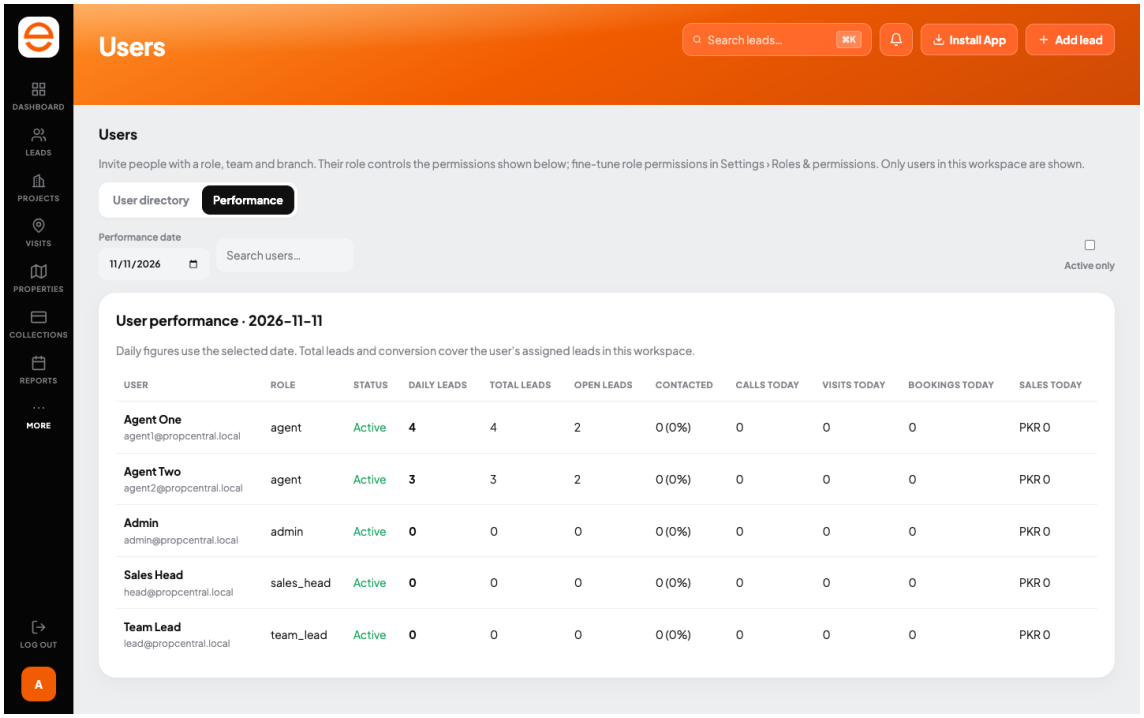

Step	Action	Check before moving on
4	Run the validation or dry run first, then confirm the import.	Required-field and duplicate warnings are understood.
5	After import, search a sample of records and check ownership, status, project, and timeline data.	Imported records are visible and usable.

Screen: Import leads: upload a CSV and review the dry-run report.

5. Review team performance

Step	Action	Check before moving on
1	Open Users and select the Performance tab.	The user directory and metrics are visible.
2	Choose the date and optionally search or filter active users.	The review period is correct.
3	Compare daily leads, total leads, open leads, contacted rate, calls, visits, bookings, and sales.	Counts are read in context, not in isolation.
4	Open the underlying lead records for overdue or unusually low activity.	Coaching or reassignment has a clear reason.
5	Record the next action for each team member and review again at the next check-in.	Performance follow-up is documented.

Screen: Users > Performance: daily metrics for each team member.

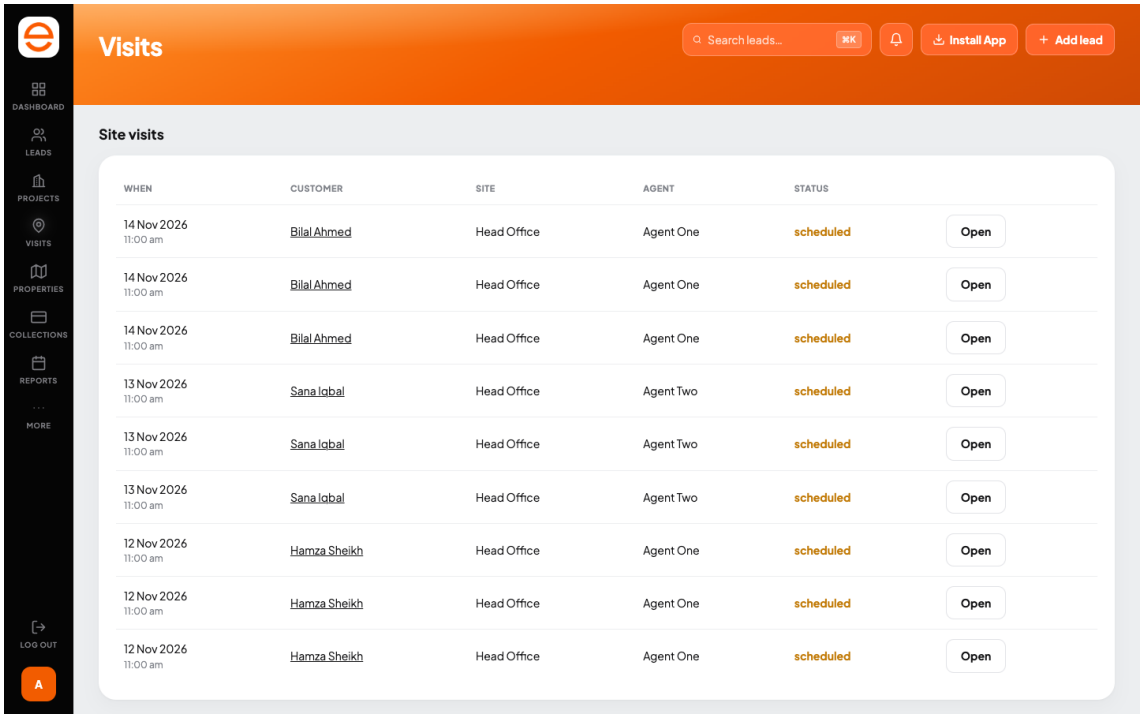

Weekly admin checklist: verify invitations and permissions, review imports and duplicates, check account-specific data access, inspect user performance, and confirm that backups and integrations are healthy.

Step-by-step: sales, inventory and collections

The full path from a unit hold to a receipted payment. Collections and Sales appear only for roles with the matching permission.

7. Visits: schedule, verify and close

Step	Action	Check before moving on
1	Open Visits and create a visit from the lead, choosing site, date, time and agent.	The visit shows on the lead timeline.
2	On arrival the agent checks in. GPS must be within the site radius set in Settings > Site visits.	Check-in is verified, not flagged unverified.
3	Ask the customer for the SMS OTP to confirm they attended.	OTP accepted.
4	Enter the mandatory feedback within the feedback window and close the visit.	No overdue-feedback flag remains.

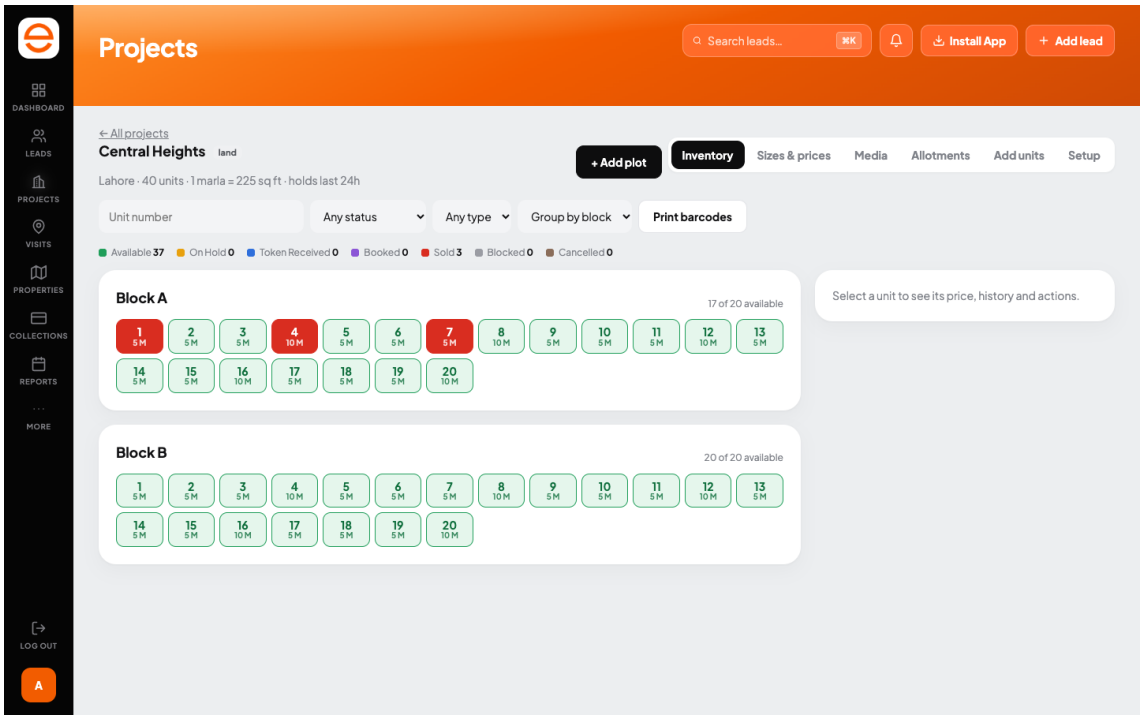

Screen: Visits: scheduled site visits with customer, site, agent and status.

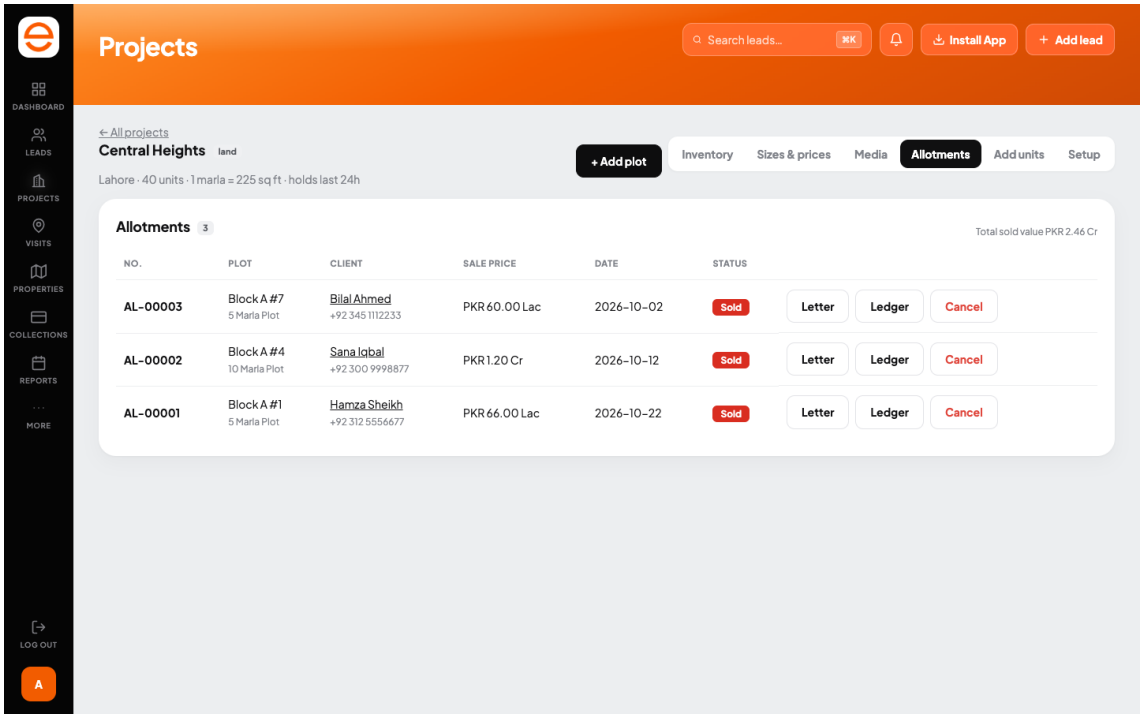

8. Hold, book and allot a unit

Step	Action	Check before moving on
1	Open Projects, choose the project, then Inventory (Grid or Map). Filter by block, size or status.	You see live unit status colours.
2	Place a Hold on the unit. Holds expire automatically and each agent has a hold limit (Settings > Inventory).	Unit shows Held and no one else can book it.
3	Create the booking against the lead. The unit becomes Booked and the lead moves to Booked together.	Unit and lead status agree.
4	Open Allotments, review the allotment and print the Booking form (applicant, nominee, plan, CNIC copies).	Form is complete and signed.

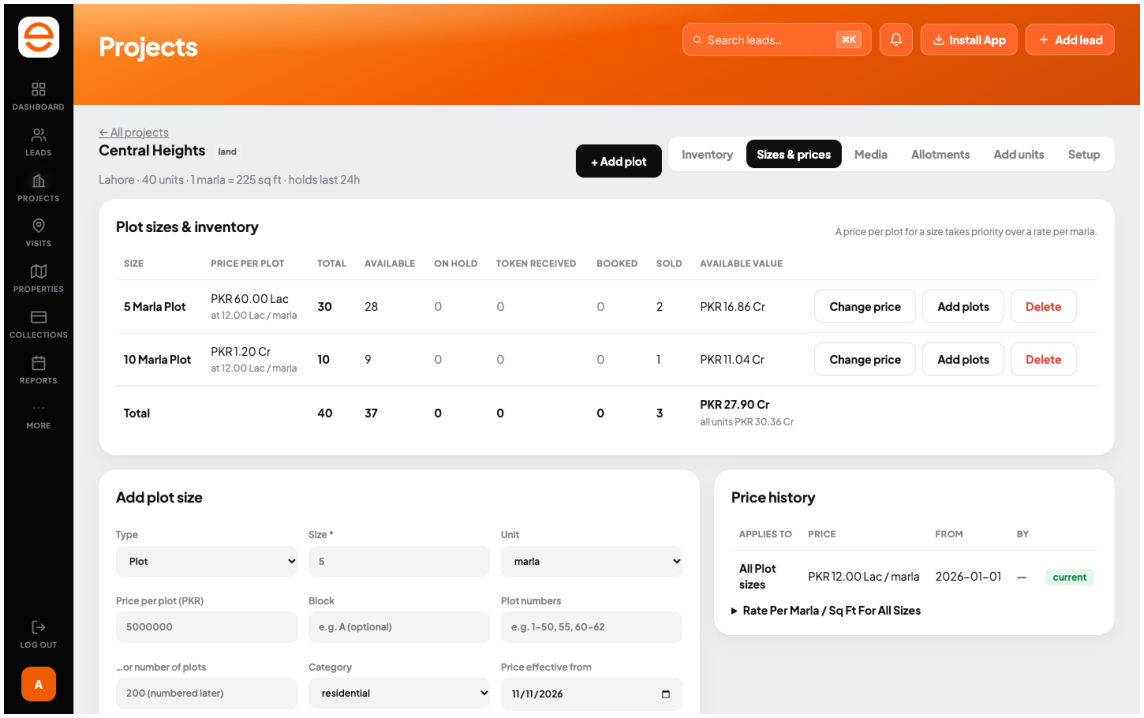

Step	Action	Check before moving on
5	Use Sizes & prices for versioned price lists, premiums and marla/kanal/sq ft conversion; Media for brochures, floor plans, photos and video links.	Pricing matches the approved list.

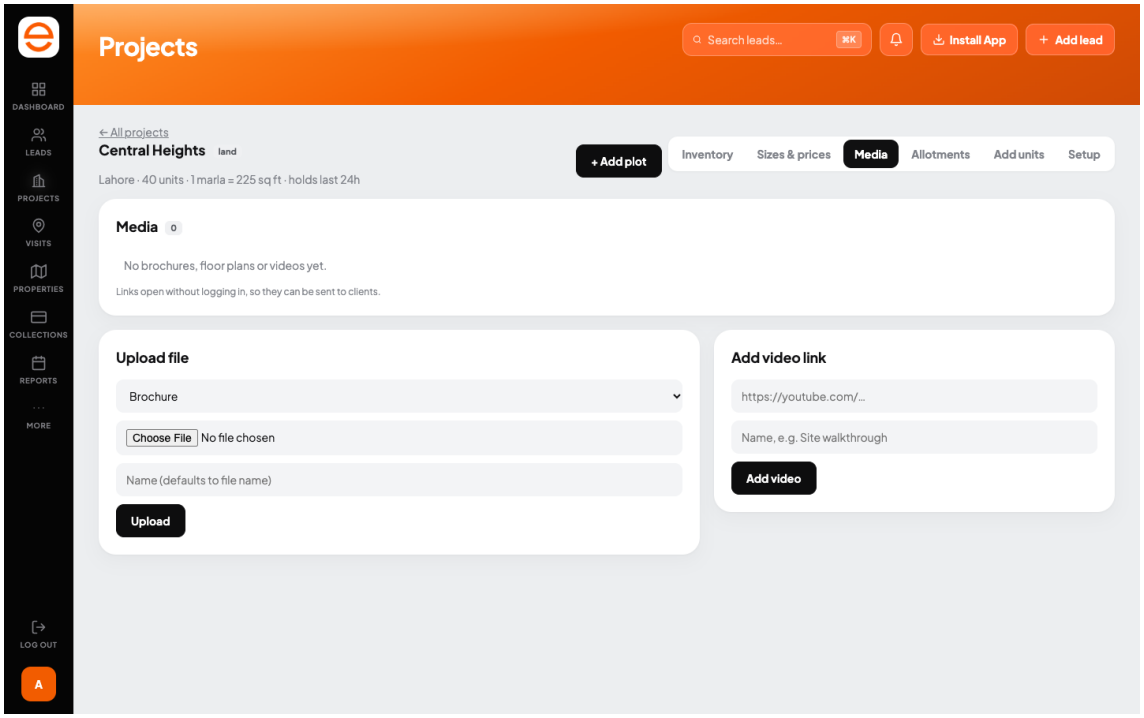

Screen: Inventory: click a unit to hold or allot it.

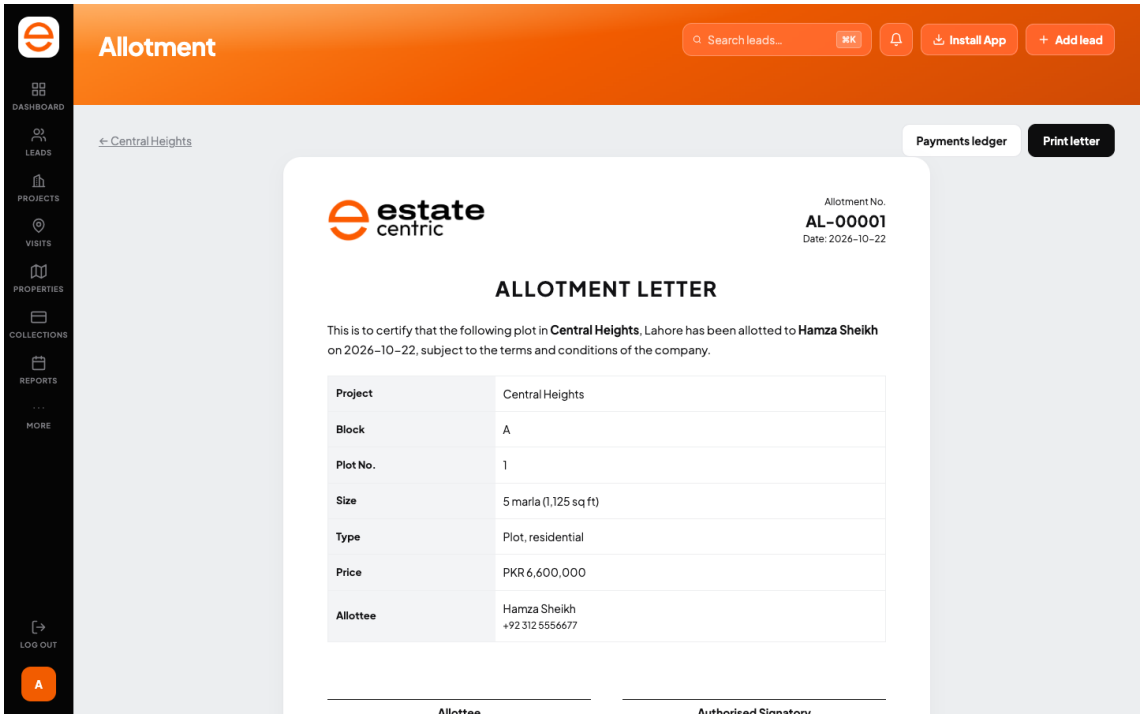

Screen: Allotments: every sold unit with client, price, letter, ledger and cancel actions.

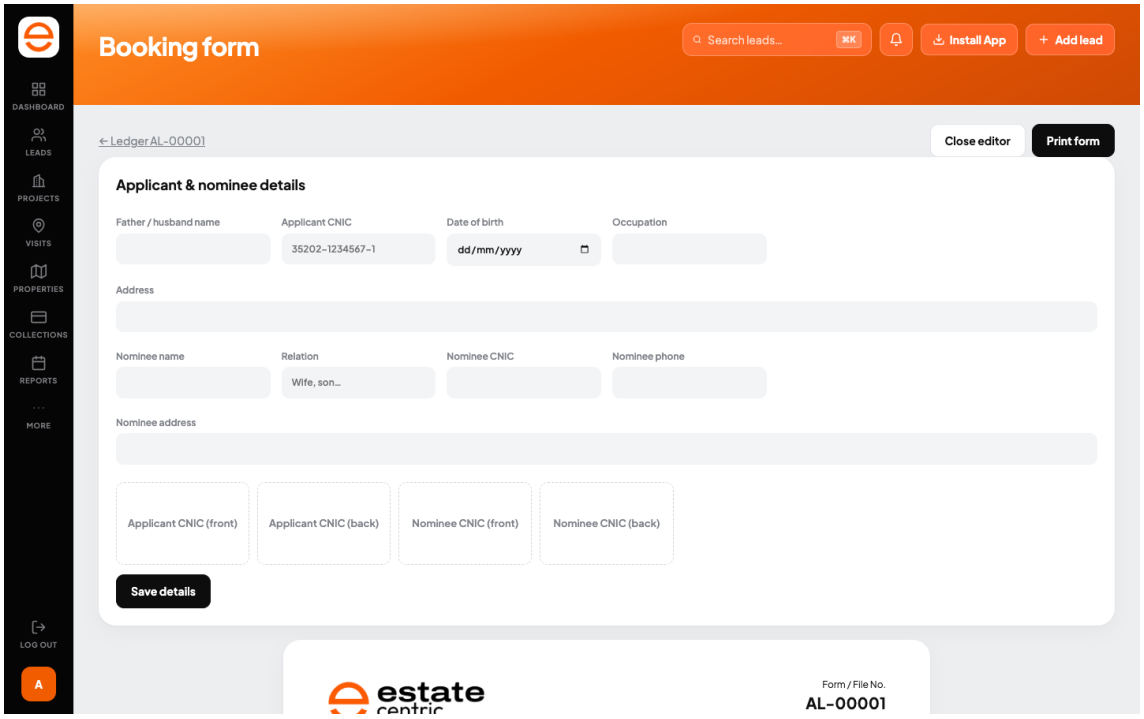

Screen: Sizes & prices: price lists, premiums and unit counts.

Screen: Media: brochures, floor plans, photos and video links.

Screen: Allotment letter ready to print.

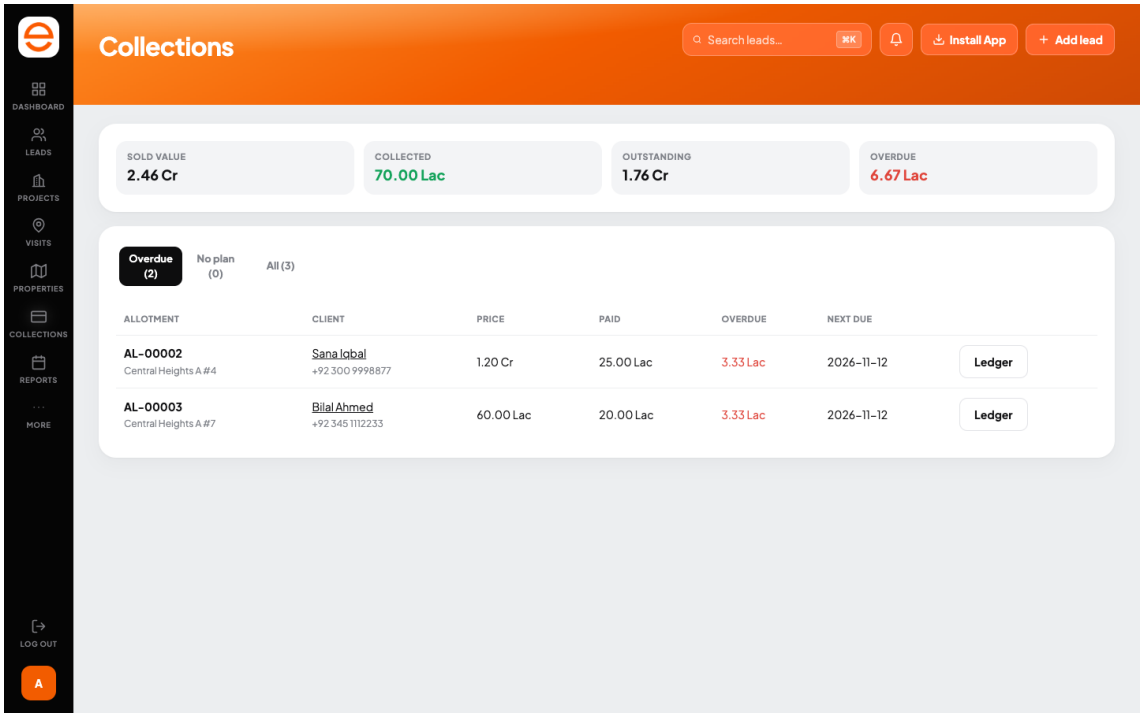

Screen: Booking form: applicant, nominee and CNIC copies.

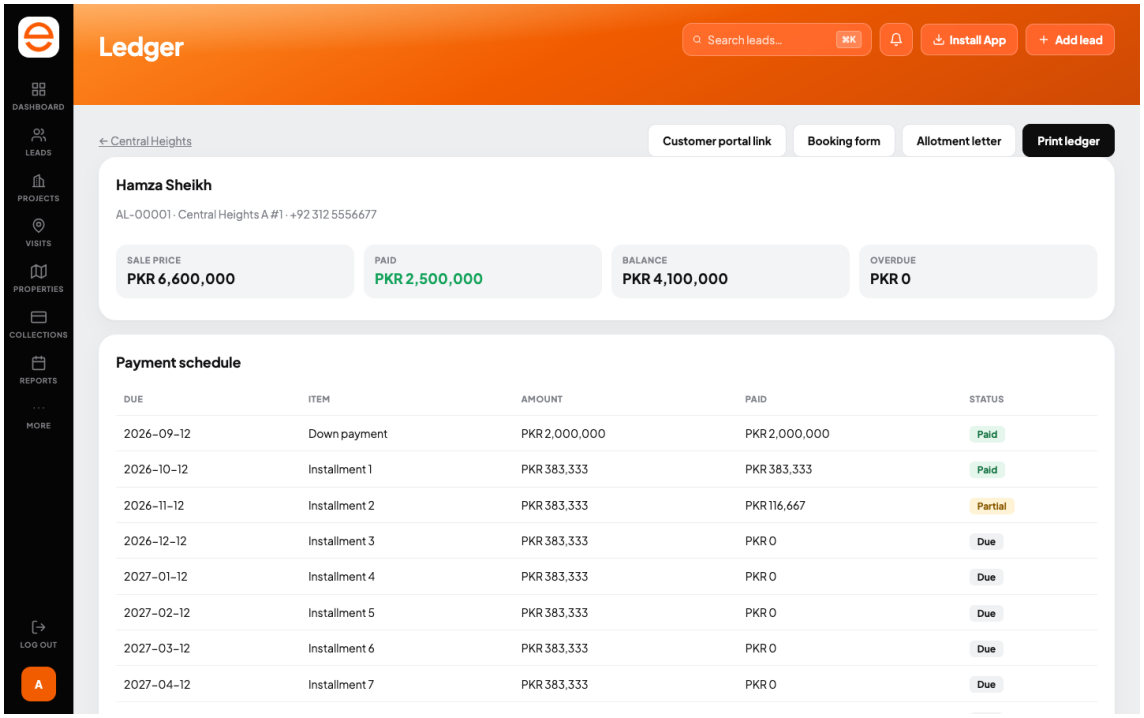

9. Collections: payment plan, receipts and ledger

Step	Action	Check before moving on
1	Open Collections and find the allotment (overdue and plan-less allotments are listed first).	The right customer is selected.
2	Create the payment plan: down payment plus monthly, quarterly, half-yearly or yearly installments.	Installment schedule is shown.

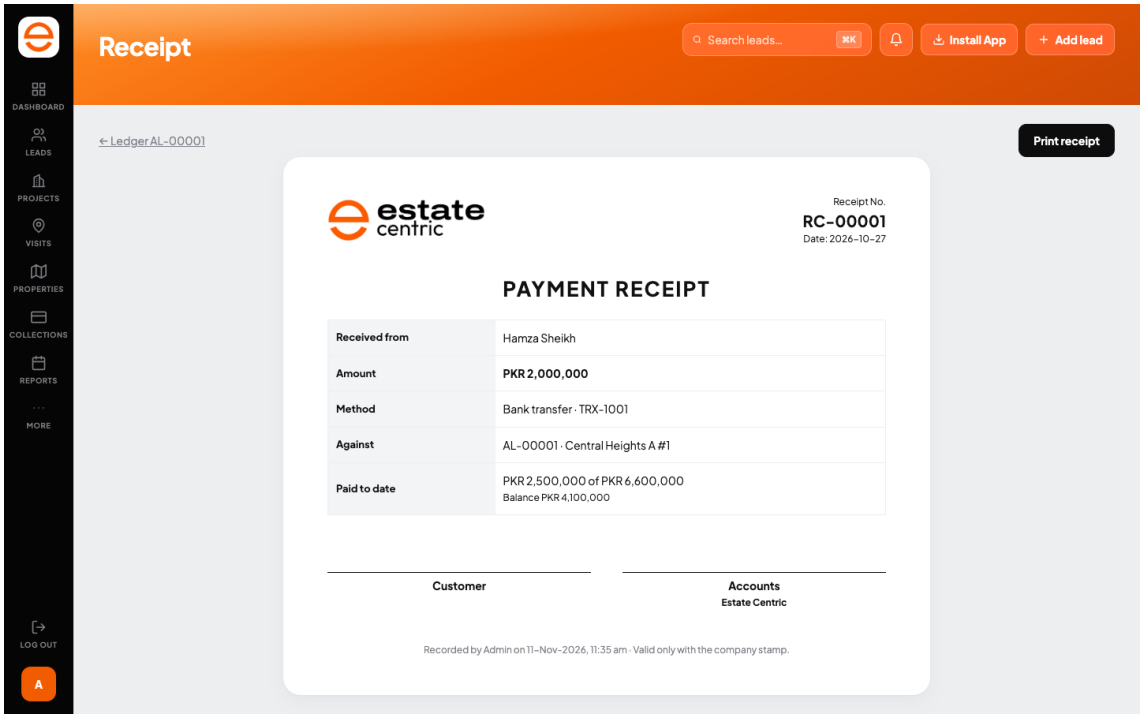

Step	Action	Check before moving on
3	Record each payment with method and date. A printable receipt (RC-00001 series) is generated.	Receipt number is issued.
4	If a payment was entered wrongly, Void it with a reason; use Refund for returned money.	Reason is recorded and ledger updates.
5	Open the customer ledger; payments are applied to the oldest installment first. Share the portal link on WhatsApp so the customer can view plots, schedule, overdue and receipts without logging in.	Overdue status is correct.
6	For a resale, use Transfer to a new owner with a receipted transfer fee.	New owner is on the allotment.

Screen: Collections: overdue and plan-less allotments with sold value, collected and outstanding.

Screen: Customer ledger: payment schedule with Paid, Partial and Due status.

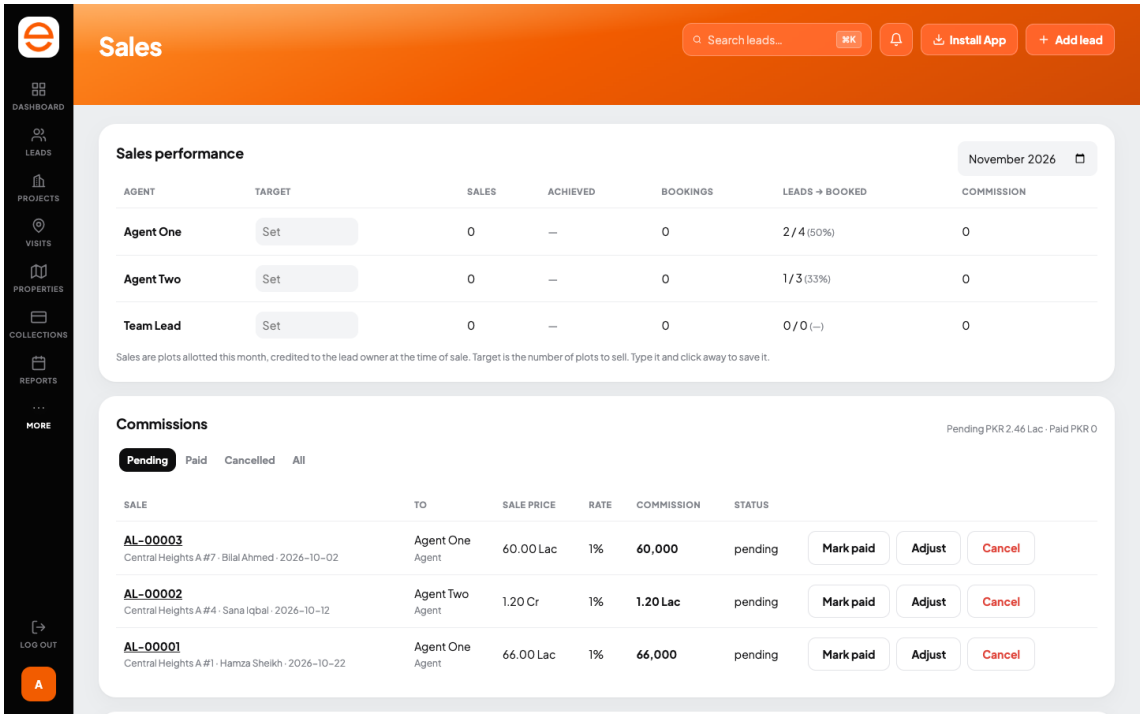

Screen: Printable payment receipt (RC series).

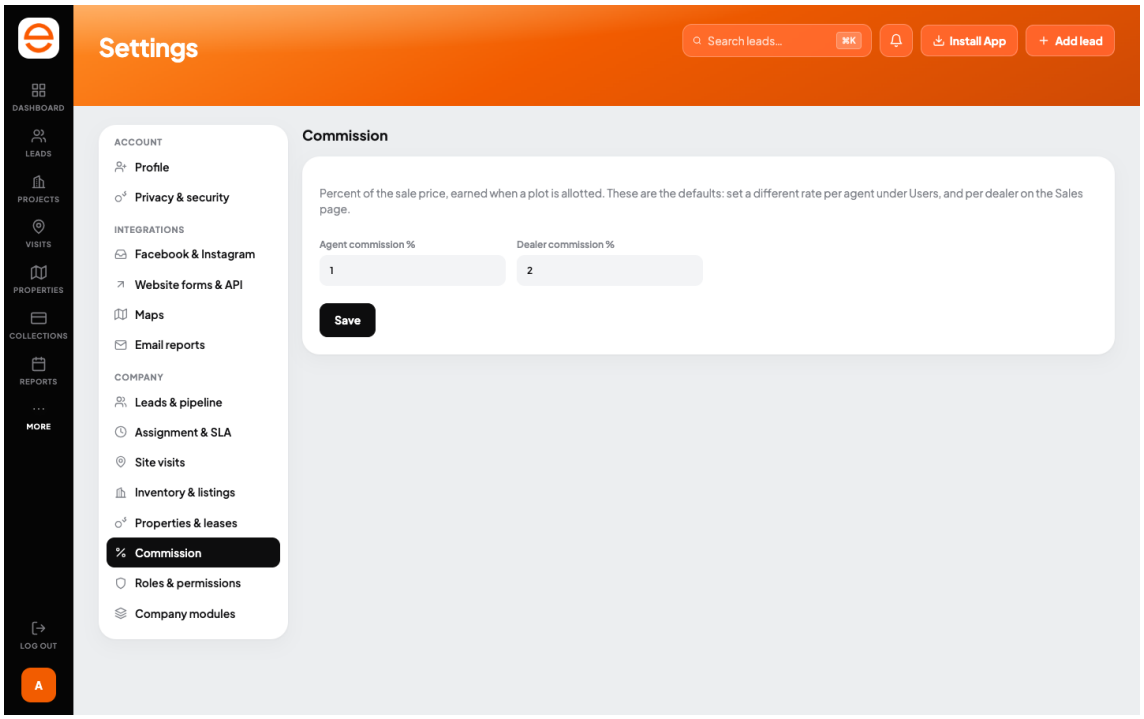

10. Sales, commissions, dealers and targets

Step	Action	Check before moving on
1	Open Sales. Add external dealers with their own rate or use the default (agent 1% / dealer 2%, editable in Settings > Commission).	Dealer list is current.
2	Tag the dealer on the lead before the booking. Commission is created automatically at allotment for the agent and dealer.	Pending commission exists.

Step	Action	Check before moving on
3	Review pending commissions; adjust or cancel with a reason. Mark paid when released.	Status is Paid and dealer balance updates.
4	If a sale is cancelled, pending commission is cancelled and a paid one is flagged for recovery.	Recovery items are followed up.
5	Use the Performance view to compare monthly targets against sales and conversion per agent. Agents see only their own figures.	Targets are set for the month.

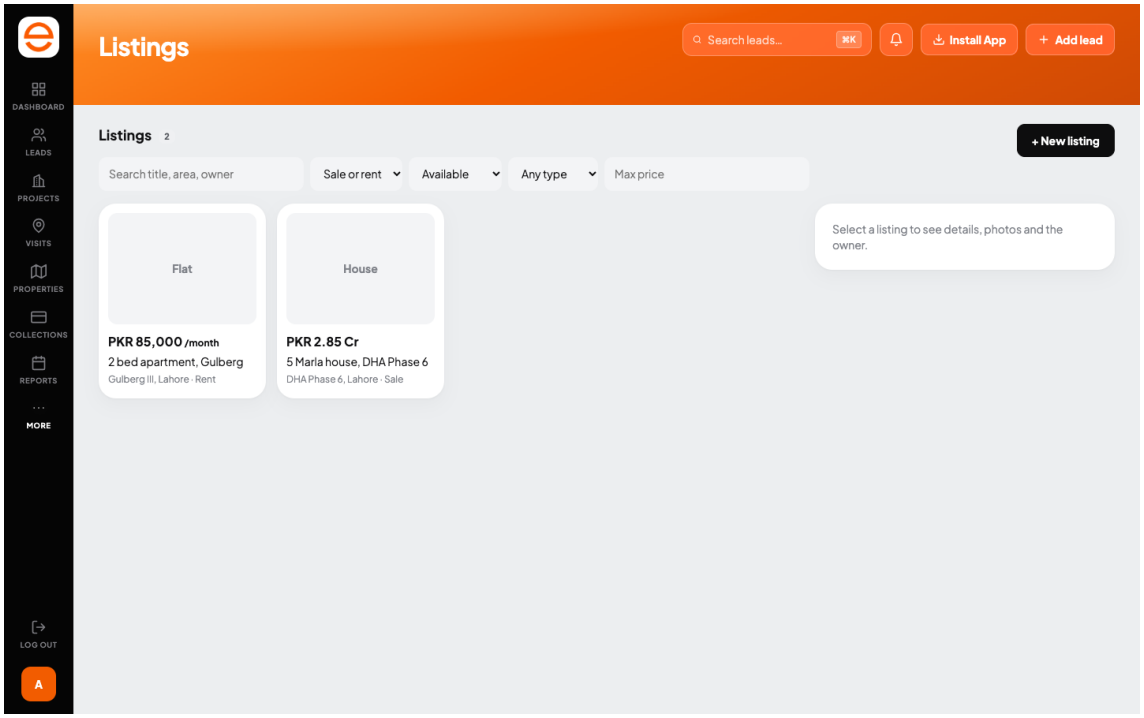

Screen: Sales: agent targets, pending commissions and dealers.

Screen: Settings > Commission: default agent and dealer rates.

11. Third-party listings

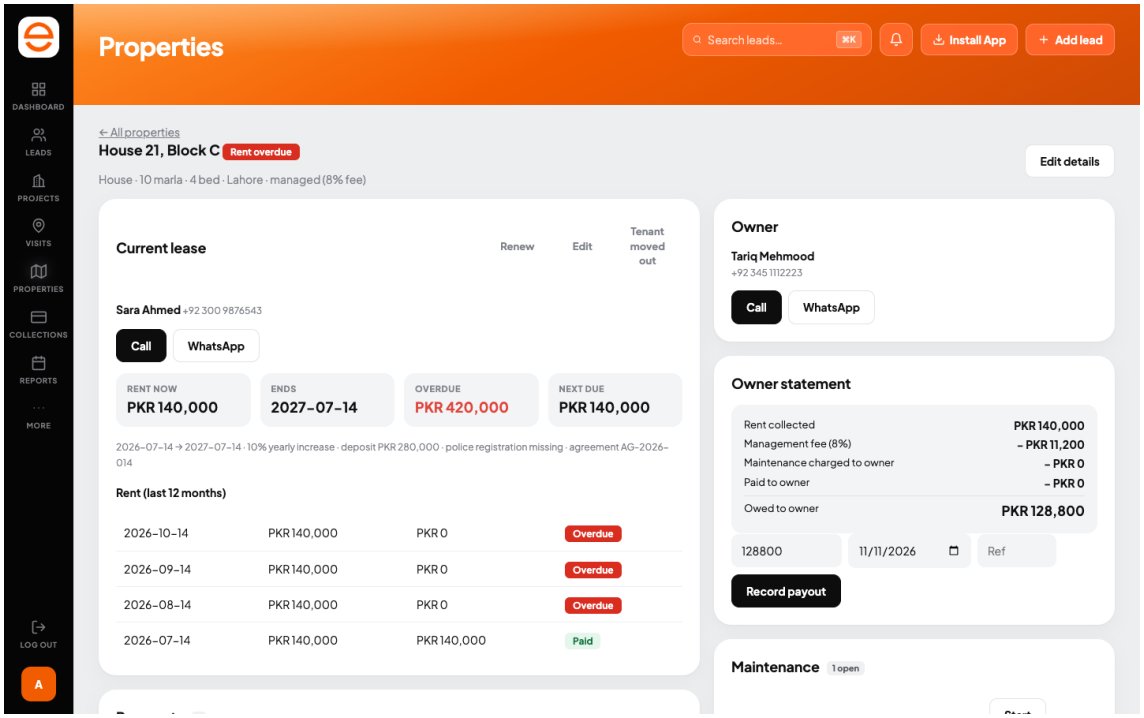

Step	Action	Check before moving on
1	Open Listings and add a resale or rental listing from an outside owner with details and up to 12 photos.	The owner is saved as a seller or landlord lead.
2	Update listing status as it progresses (statuses are configurable in Settings > Inventory).	Status is current.
3	Share the listing to WhatsApp for buyers or tenants.	Message contains the listing link.

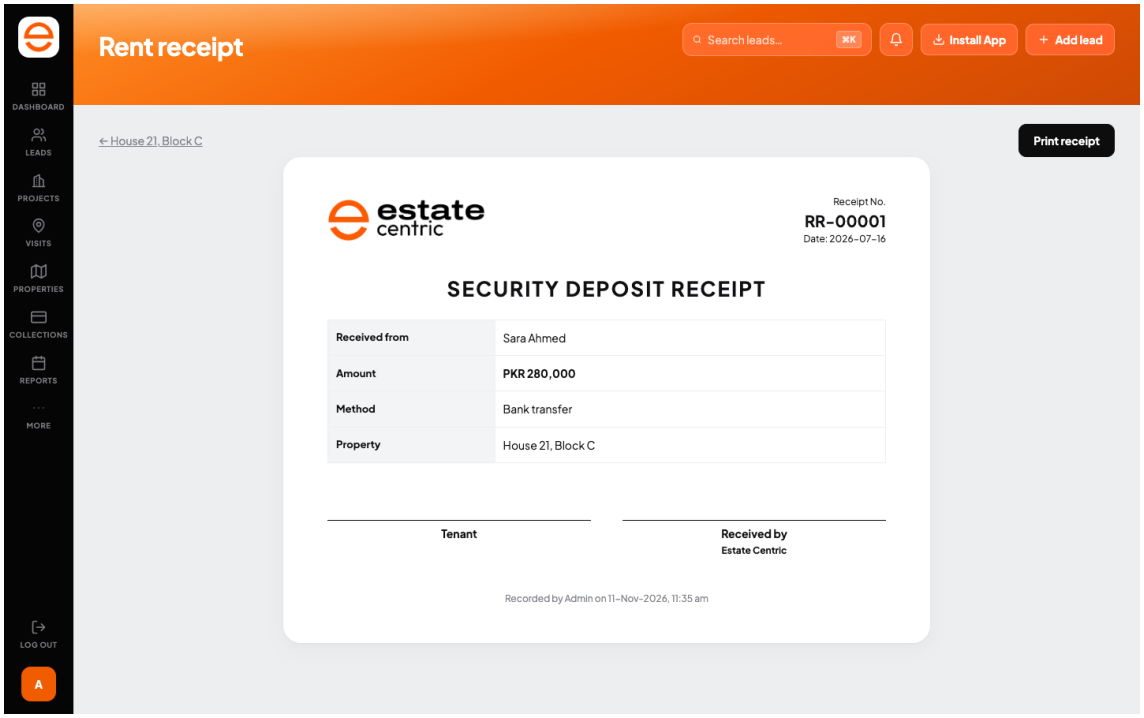

Screen: Listings: sale and rent listings from outside owners.

12. Property management: leases, rent and owners

Step	Action	Check before moving on
1	Open Properties > Societies and draw the society, phase or block boundary; upload the plan image and align it by matching 2+ points.	The overlay lines up with the satellite map.
2	Switch to Properties and click the map to add a property. It takes the society, phase and block it falls in.	Pin is inside the right area.
3	Add owner and tenant (one-tap call or WhatsApp) and create the lease with rent, deposit, yearly increase, police registration and agreement number.	Lease dates and rent are correct.
4	Track the monthly rent schedule. Record rent, deposit and refund receipts (RR-00001 series). Overdue arrears carry over on renewal.	Schedule shows what is paid.
5	Use Renew, Edit or Tenant moved out as the lease changes; amber and red colours warn of lease ending and overdue rent.	Map colour matches reality.
6	Log maintenance jobs charged to owner, tenant or company, then review the owner statement (rent minus fee, owner costs and payouts) and record payouts.	Statement balances.

Screen: Property page: lease, rent schedule, owner statement and maintenance.

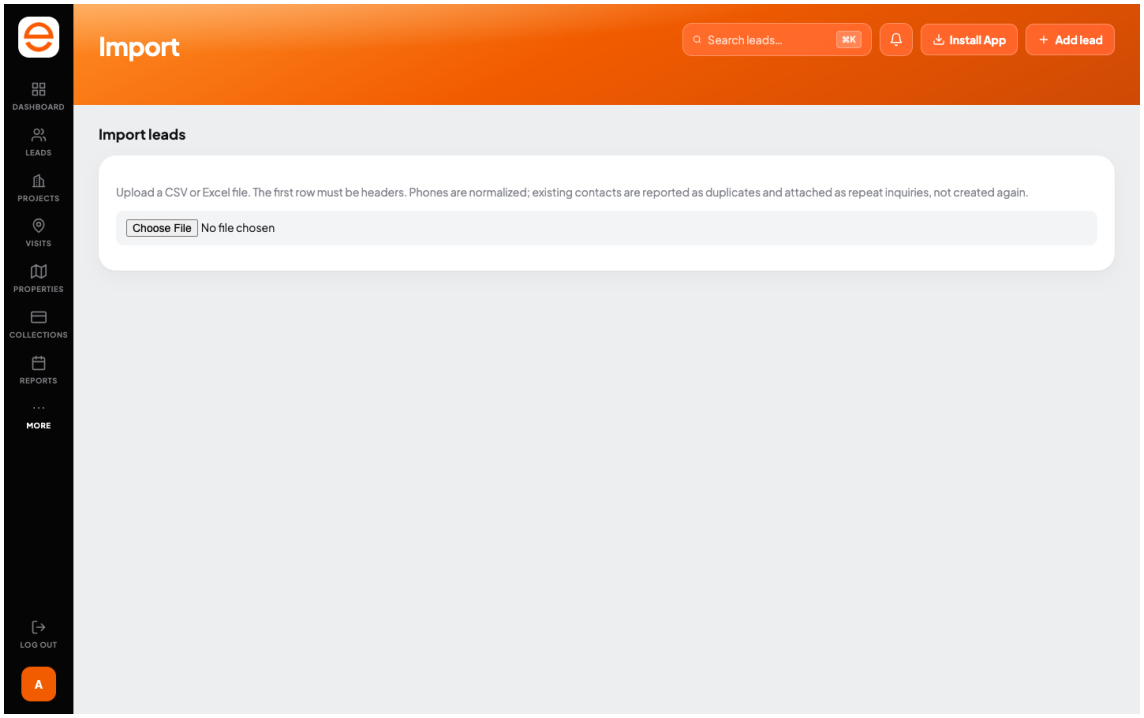

Screen: Rent or deposit receipt (RR series).

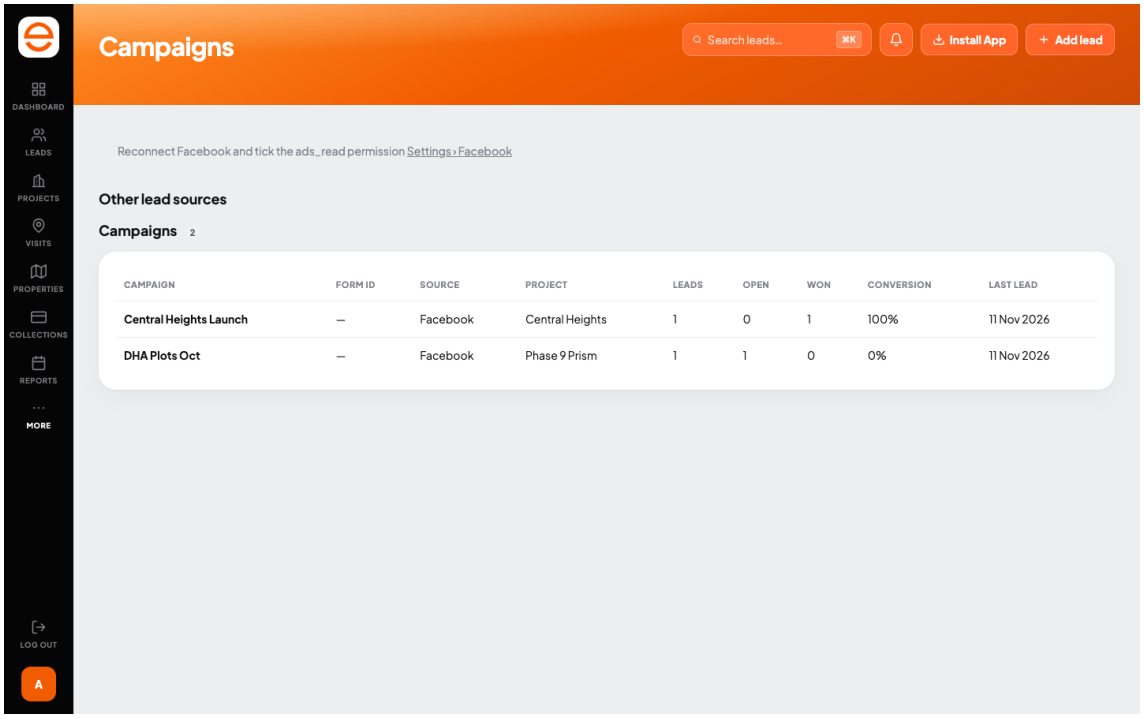

13. Import, campaigns and lead capture

Step	Action	Check before moving on
1	Open Import (permission required), upload CSV and run the dry run to review duplicates and invalid rows.	Dry-run report is clean.
2	Commit the import, then spot-check ownership, status and timelines.	Records are usable.

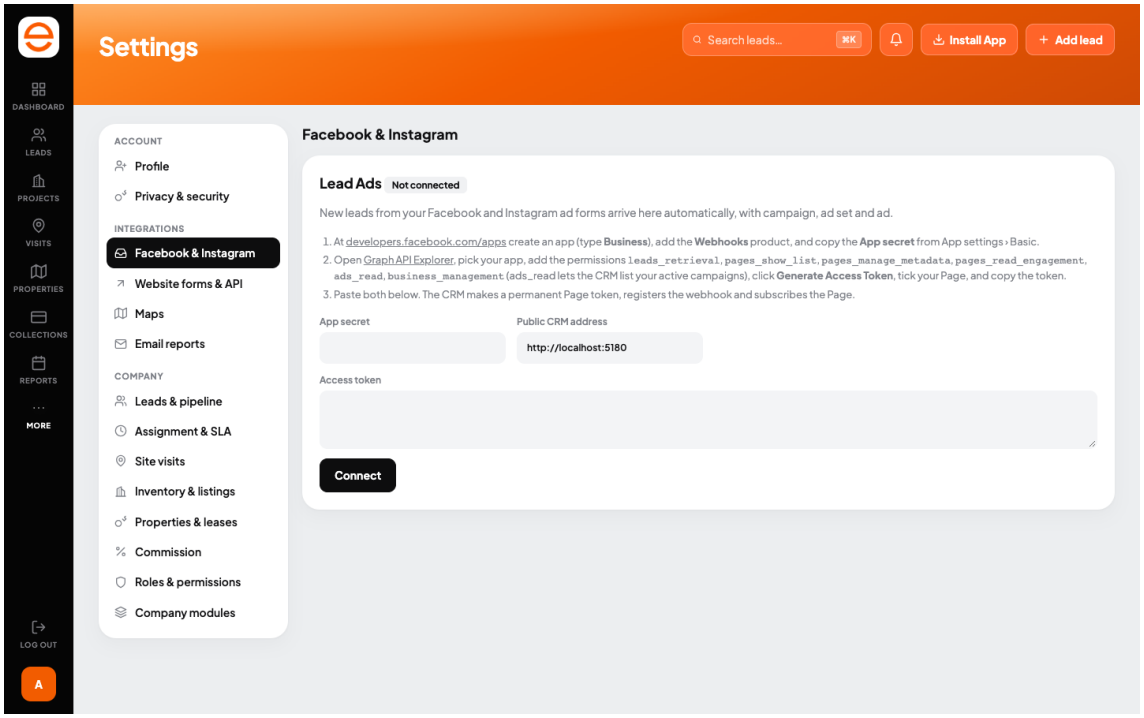

Step	Action	Check before moving on
3	Open Campaigns to see Meta campaign, ad set and ad performance by lead, plus other lead sources.	Source quality is understood.
4	Connect Facebook/Instagram in Settings (paste app secret and Graph API Explorer token; the CRM registers the webhook), and use Website forms & API with the x-api-key header for forms, Zapier and portals.	Test lead arrives with its source.

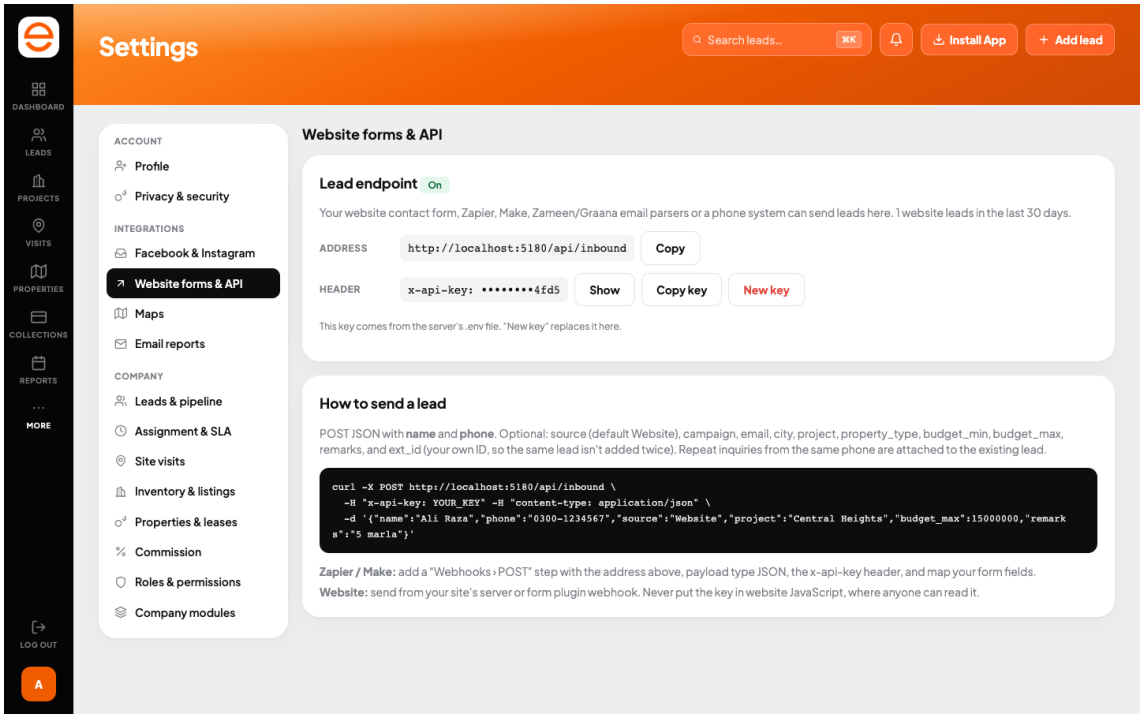

Screen: Import leads.

Screen: Campaigns: leads, wins and conversion per campaign.

Screen: Settings > Facebook & Instagram: connect lead ads.

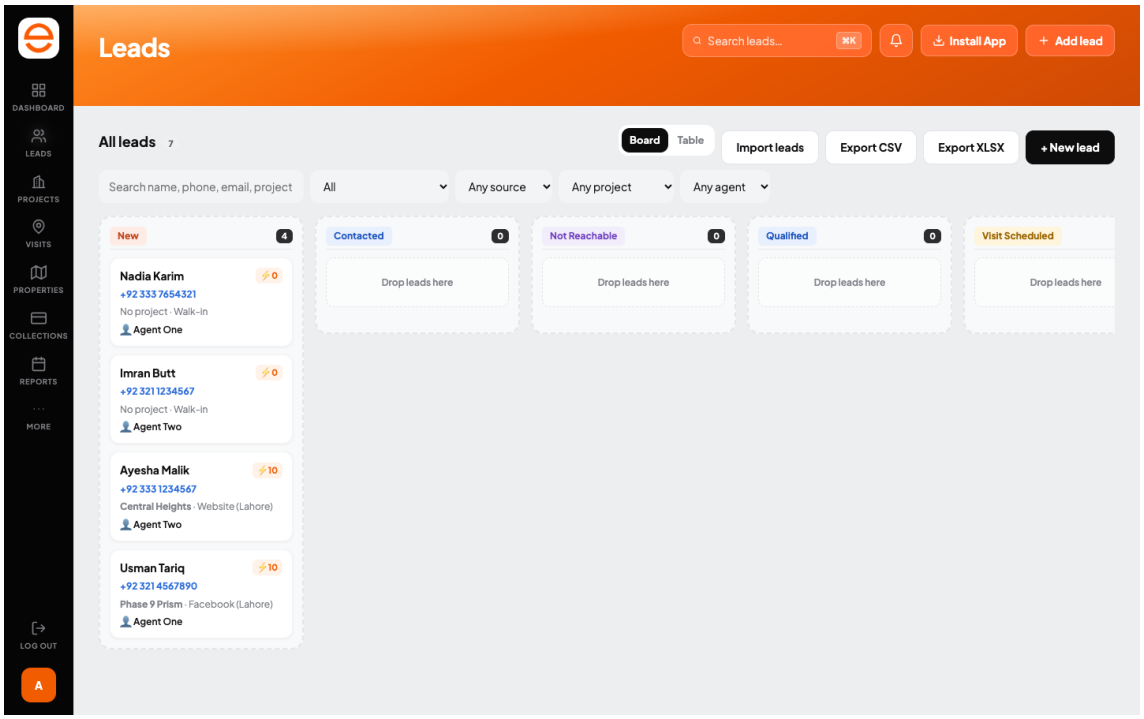

Screen: Settings > Website forms & API: endpoint, key and sample request.

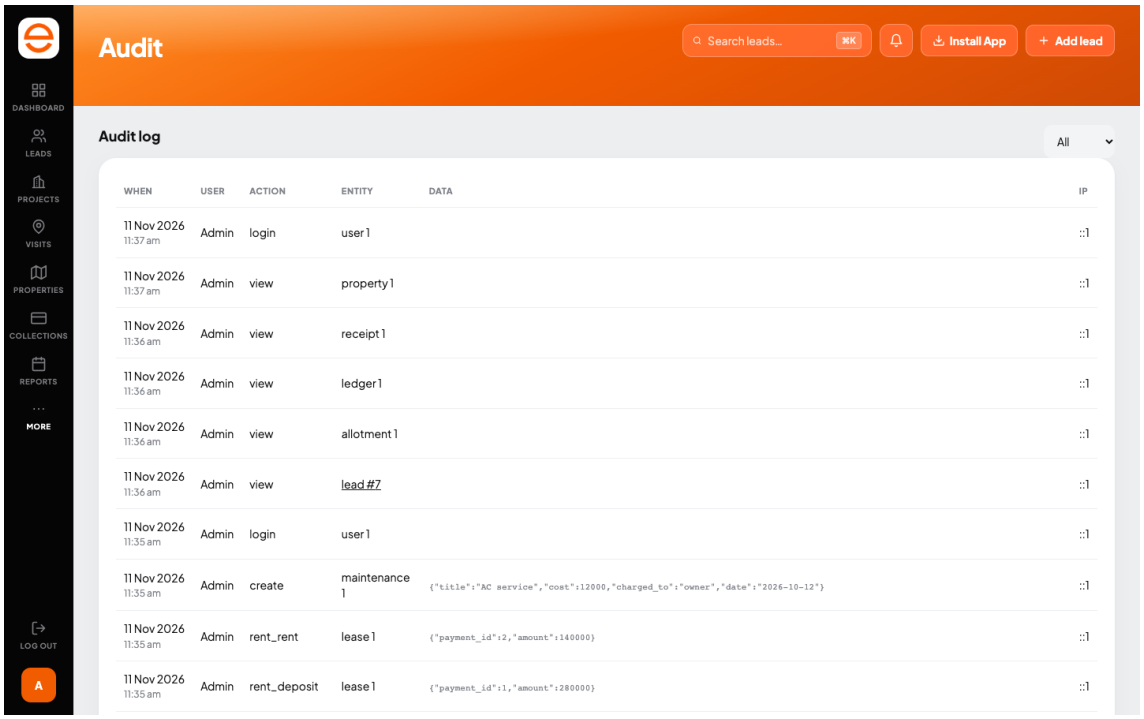

14. Approvals, exports and the audit log

Step	Action	Check before moving on
1	A lead marked Lost or Junk needs a reason and note; a team lead approves where required (Leads > Pending approval).	Approval queue is empty.
2	Branch managers request a lead export; the sales head or admin approves. Each approval downloads once and the file is watermarked.	Export is logged.

Step	Action	Check before moving on
3	Admins open Audit to review logins, views, exports and changes. The log is append-only and cannot be edited.	Unusual access is investigated.

Screen: Leads filters include Pending approval.

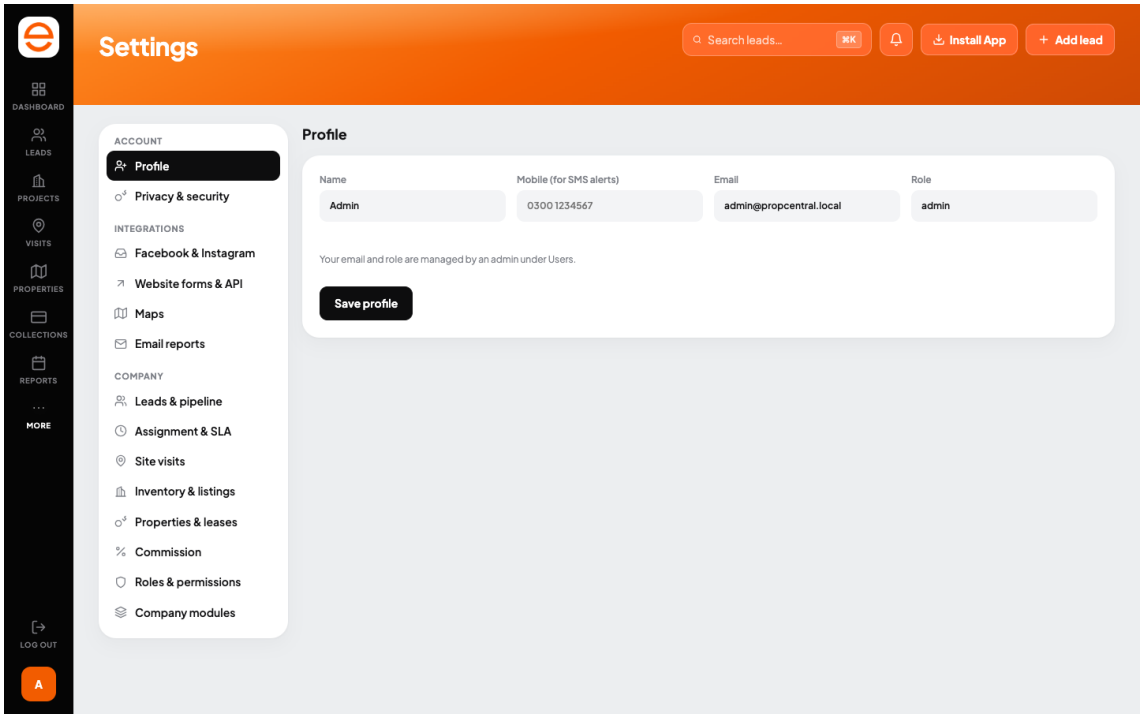

Screen: Audit: append-only log of logins, views, exports and changes.

Step-by-step: workspace setup and everyday tools

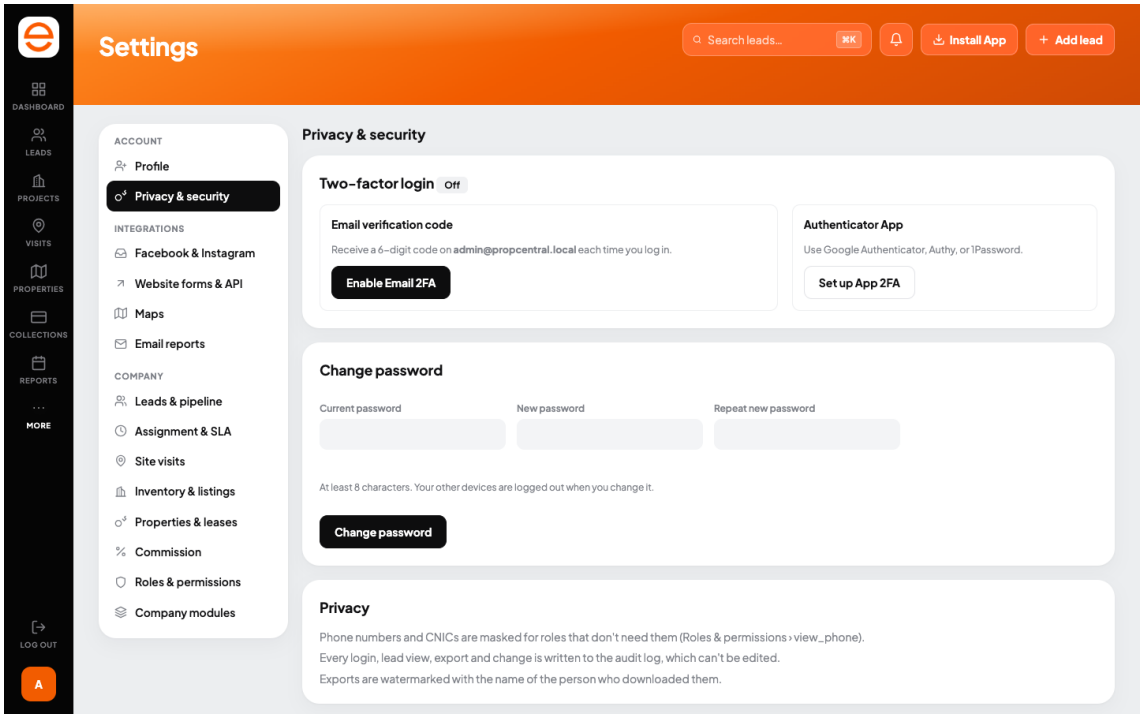

Settings are grouped into Account, Integrations and Company. Admins see all groups; other roles see what their permissions allow.

15. Set up a new workspace (first week)

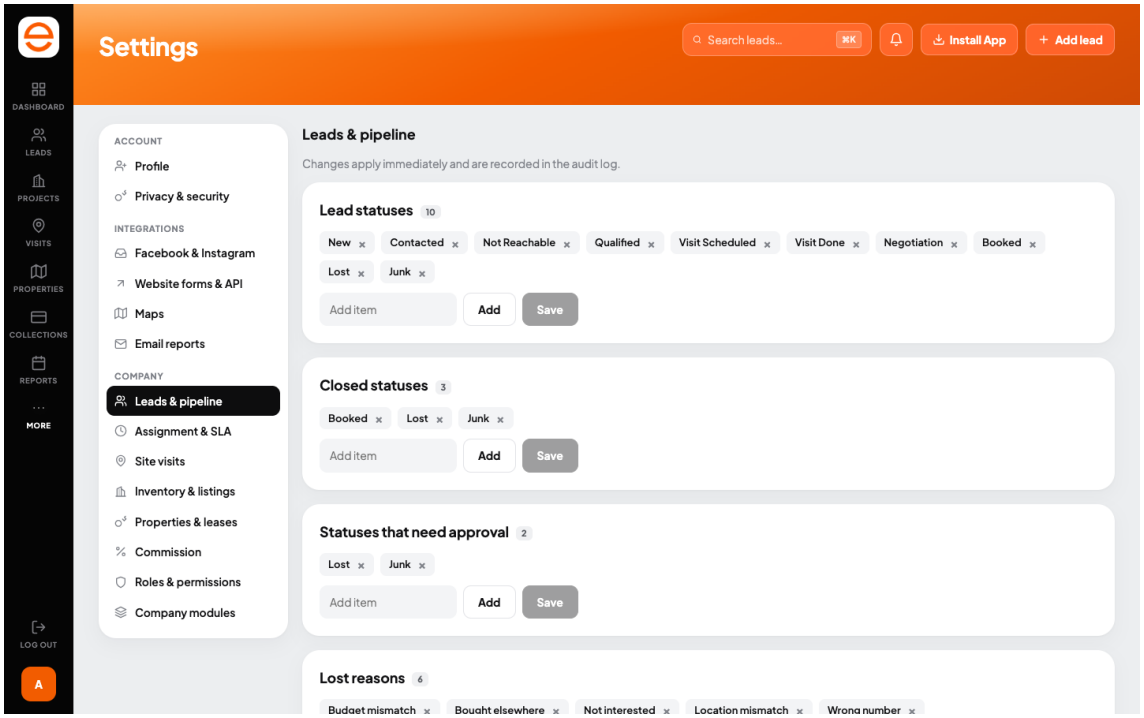

Step	Action	Check before moving on
1	Sign up from the login page and choose a plan. The free trial lasts 7 days; an admin is never locked out.	You can sign in.
2	Settings > Profile and Privacy & security: confirm details, change the default password (10+ characters with letters and numbers) and enable authenticator-app 2FA.	2FA is active.
3	Settings > Leads & pipeline: set statuses, closed and approval statuses, lost reasons, sources, activity types, lead and property types, custom fields, stale days and scoring.	Pipeline matches how you sell.
4	Settings > Assignment & SLA: add prioritised assignment rules (source, city, project, budget, hours, round-robin, load or performance), SLA minutes and working hours.	New lead routes to the right agent.
5	Settings > Site visits, Inventory & listings, Properties & leases, and Commission: configure the lists and limits each module uses.	Defaults reviewed.
6	Settings > Letterhead & receipts: enter your company name, address, phone, email, signatory title and footer note, upload your logo and check the preview. This letterhead prints on allotment letters, booking forms, payment and rent receipts and the customer portal for your company only.	A test letter shows your name and logo.
7	Settings > Maps: paste the MapTiler key. Settings > Email reports: choose weekly report recipients and send a preview.	Map loads; preview received.
8	Settings > Roles & permissions: tick what each role can do. Users: invite the team and set role, team and branch.	Everyone has the least access needed.
9	Check plan limits (users, branches, projects, units, leads) shown on Users before adding more.	You stay under the cap.

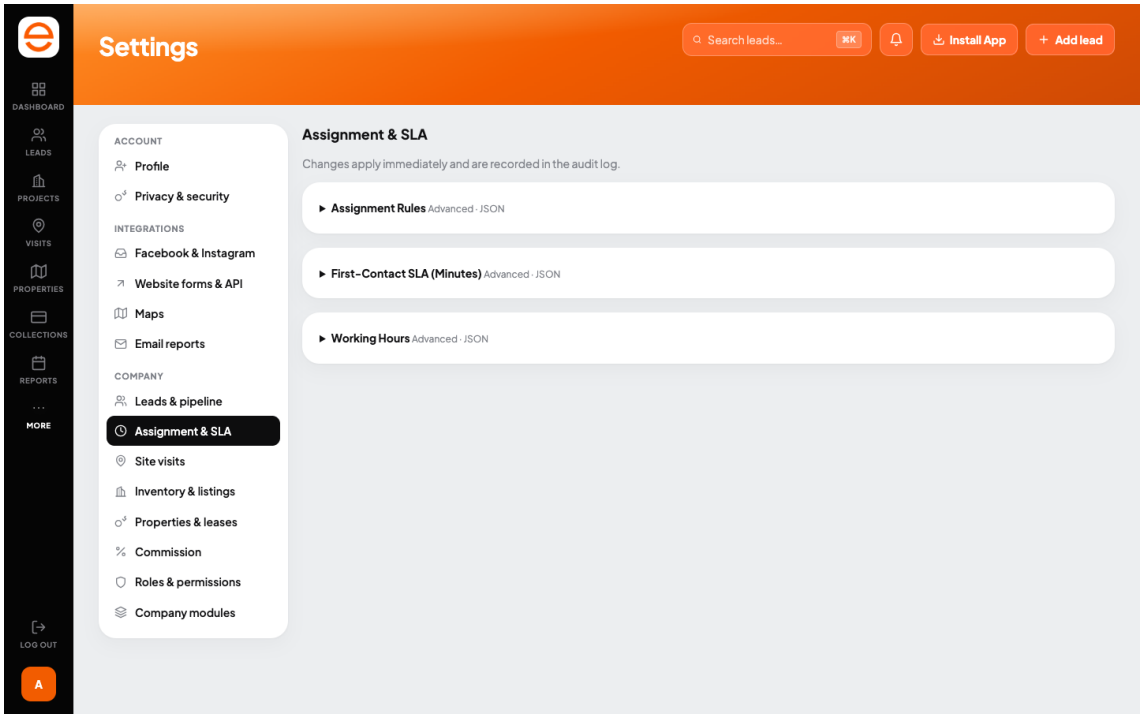

Screen: Settings > Profile.

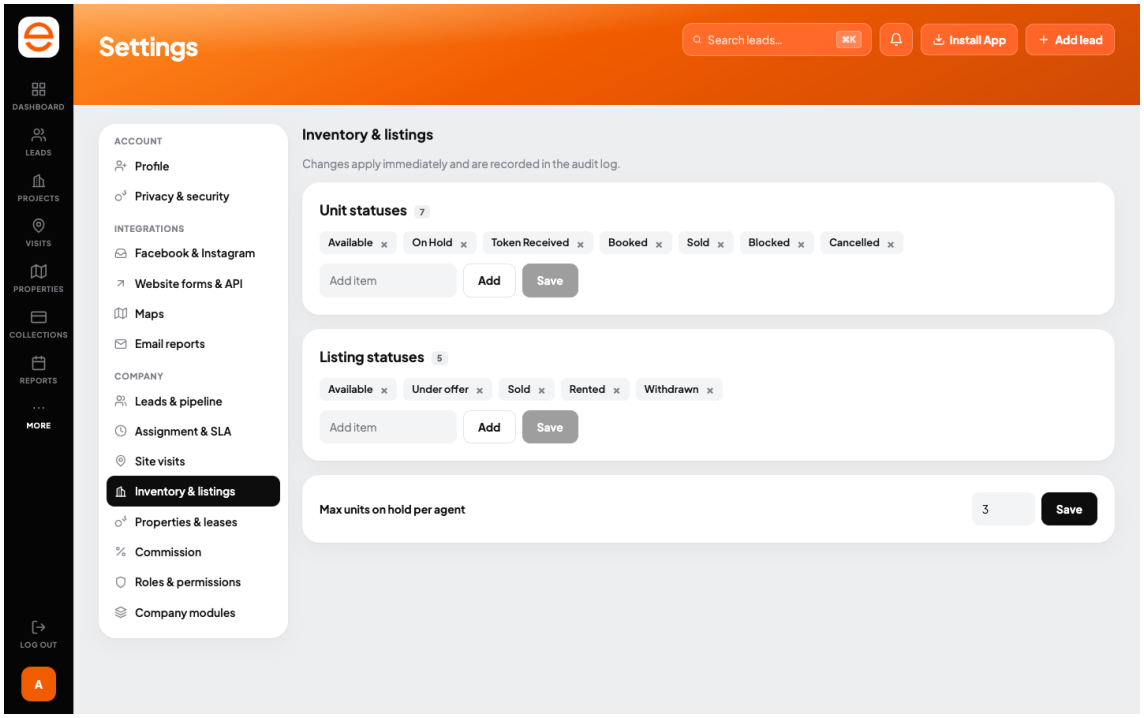

Screen: Settings > Privacy & security: two-factor and password.

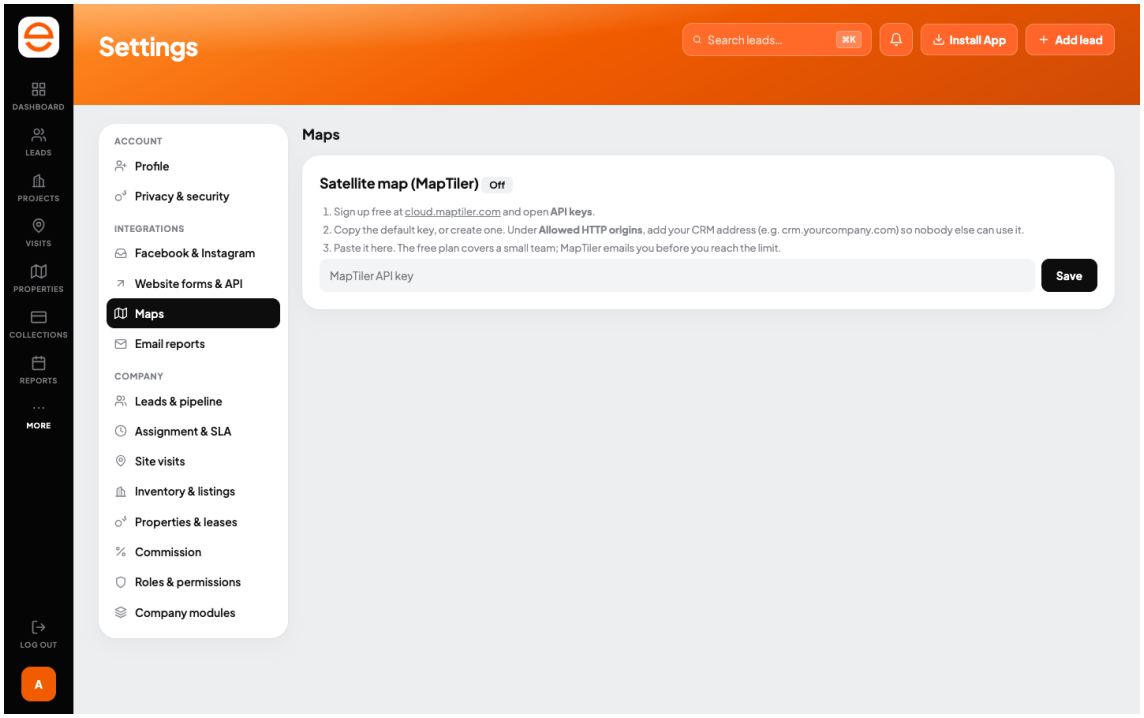

Screen: Settings > Leads & pipeline: statuses, reasons, sources and custom fields.

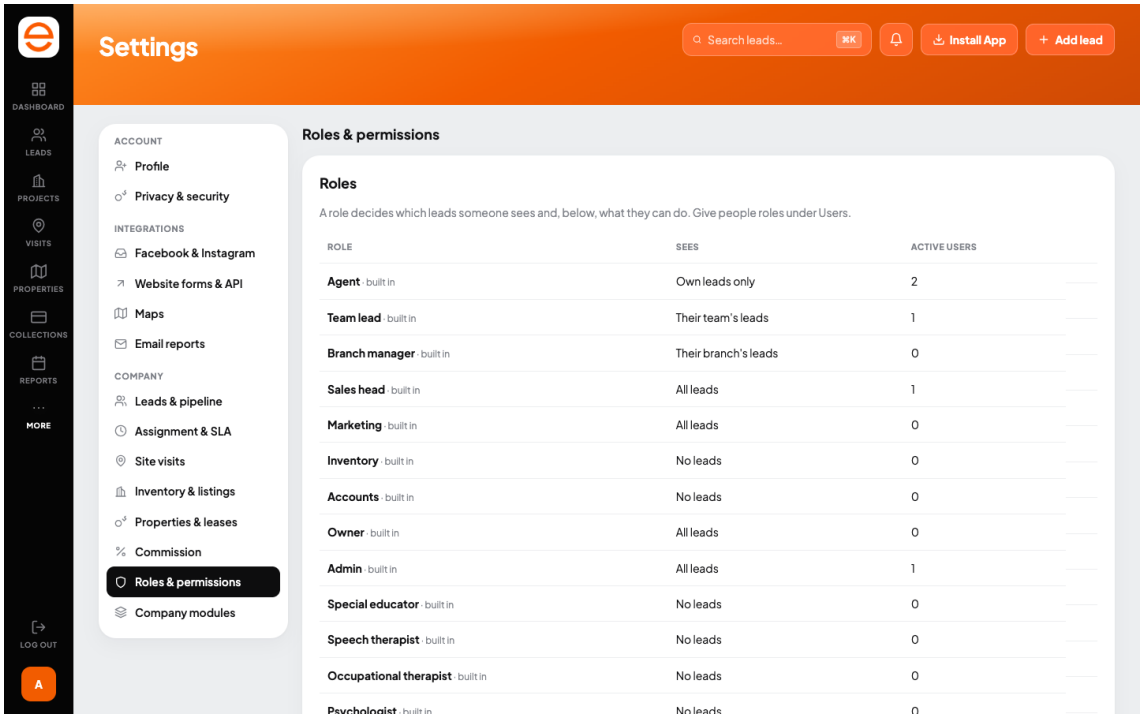

Screen: Settings > Assignment & SLA: rules, SLA minutes and working hours.

Screen: Settings > Inventory & listings.

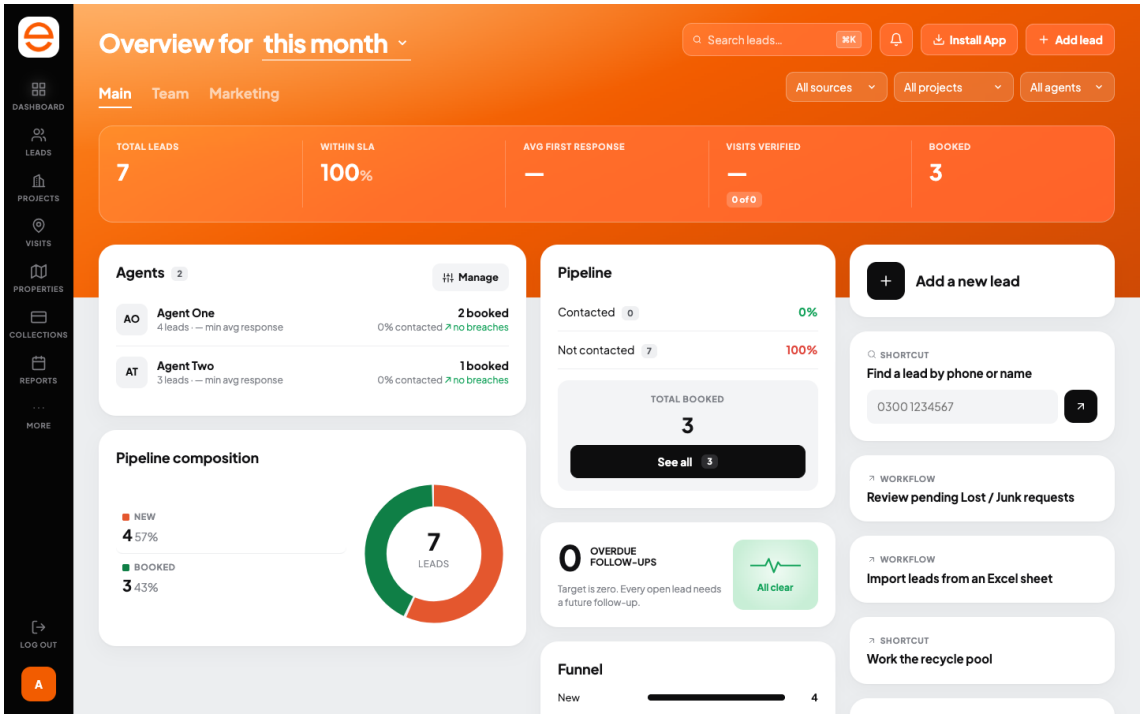

Screen: Settings > Maps: add the map key.

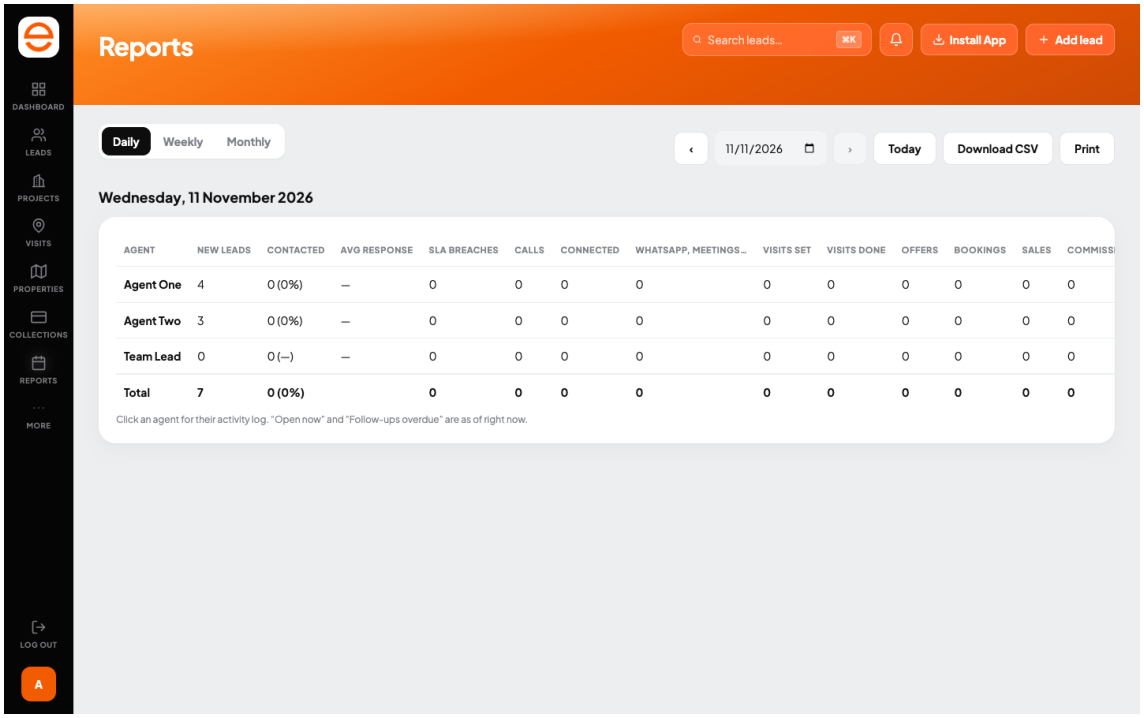

Screen: Settings > Roles & permissions: what each role can do.

16. Everyday tools: dashboard, reports, assistant, mobile

Step	Action	Check before moving on
1	Dashboard tabs: Main, Team and Marketing. Filter by date to see KPIs, funnel, leaderboard, source and campaign table, and lost reasons.	You know today's priorities.
2	Reports: switch daily, weekly (Mon-Sun) or monthly, drill into one agent for a day-by-day view, then use CSV or Print.	Numbers match the period.
3	Assistant (enabled when an AI key is configured): ask about sales, agents and commissions; it only sees data your role already sees.	Answer matches the dashboard.
4	Use the mobile bottom bar for Dashboard, Leads, Projects and Visits; open More for Sales, Listings, Import, Campaigns, Users, Settings and Audit. Install the app to your home screen from the browser prompt.	App opens full screen.
5	Forgot password: request a reset; an admin sends a one-time link that expires in 30 minutes and signs the account out everywhere.	New password works.

Screen: Dashboard.

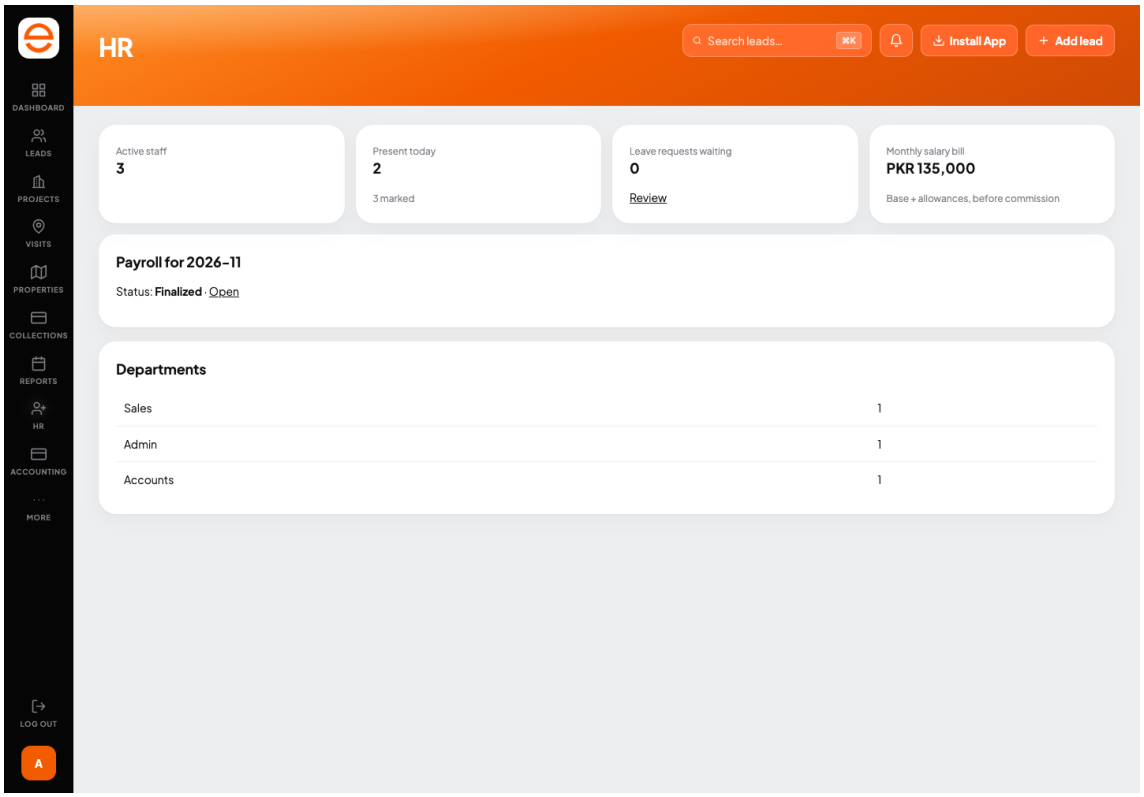

Screen: Reports: daily, weekly or monthly figures per agent, with CSV and print.

Step-by-step: HR & Payroll (optional module)

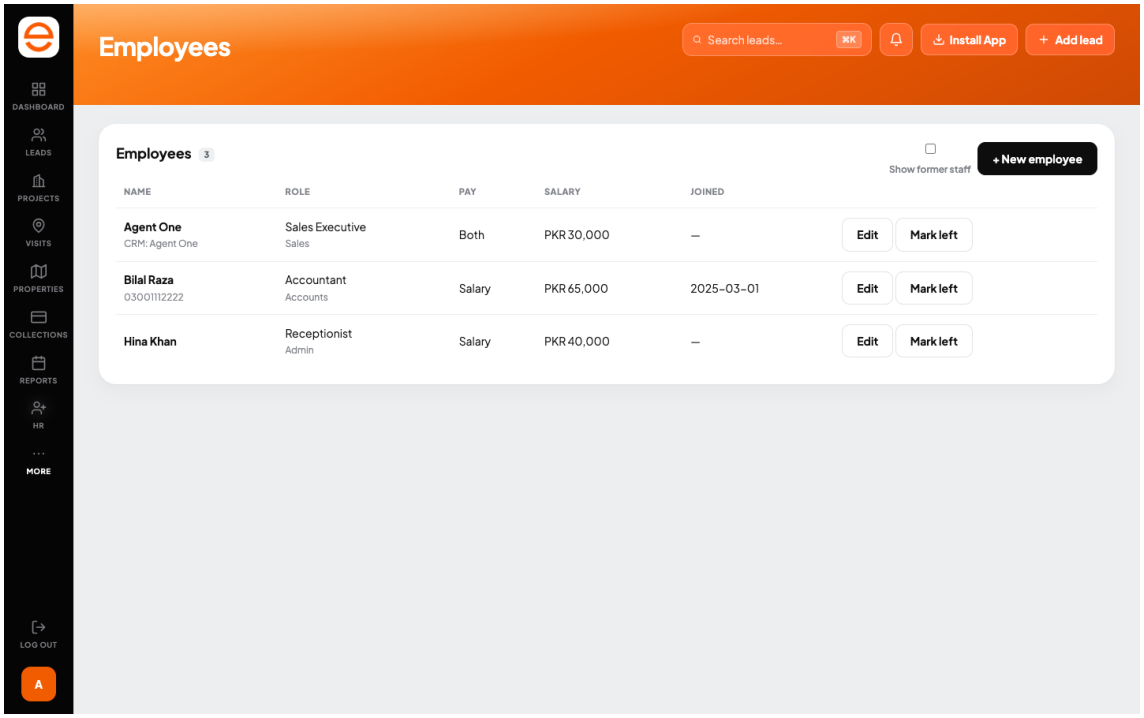

For clients who want a full back office. The platform owner switches the HR & Payroll module on for the company; it then appears as HR in the menu for roles with the hr permission (accounts, sales head, admin, owner). Salary screens need the stricter payroll permission (accounts, admin, owner).

17. Employees and attendance

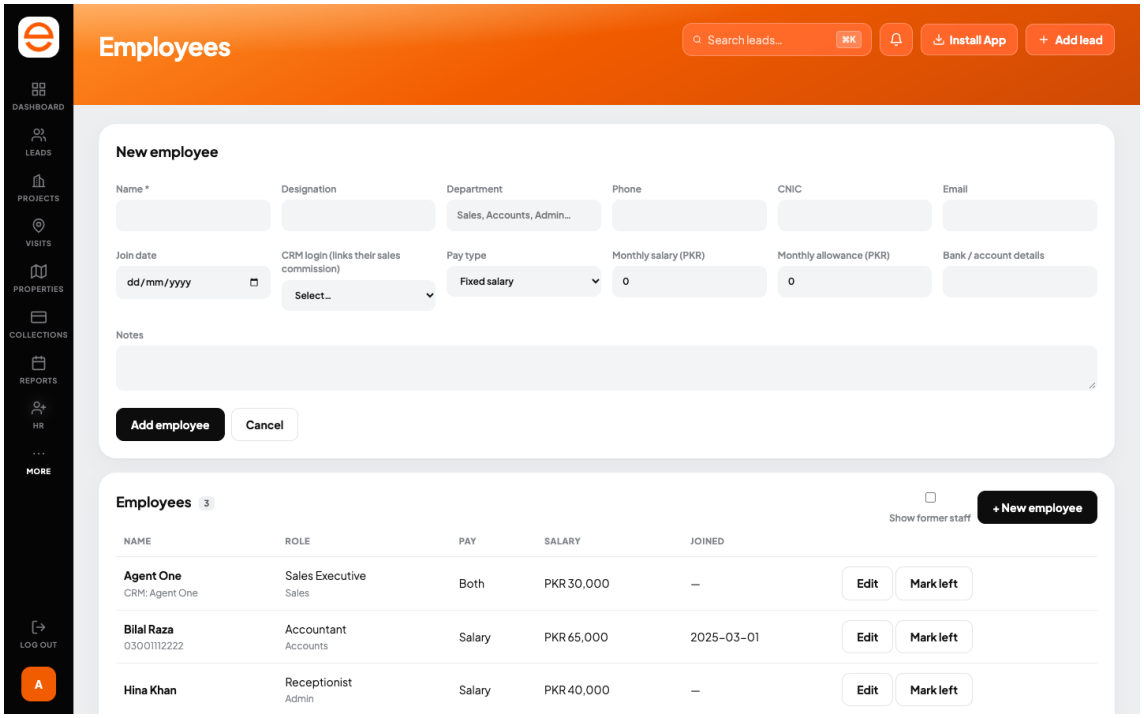

Step	Action	Check before moving on
1	Open HR for the overview: active staff, who is present today, leave waiting for approval and the monthly salary bill.	Overview loads.
2	Open Employees > New employee. Enter name, designation, department, phone, CNIC and join date. Choose the pay type: fixed salary, commission only, or salary plus commission, then the monthly salary and allowance.	Pay type matches the contract.
3	Link the employee to their CRM login. Their sales commission from allotments is then pulled into payroll automatically.	Sales staff are linked.
4	Open Attendance, pick the date and mark each person Present, Late, Half day, Absent, Paid leave, Unpaid leave or Holiday (or use Mark all present), then Save.	Every working day is marked.
5	Open Leave, record a request and Approve or Reject it. Approved leave fills the attendance sheet for working days; unpaid leave is deducted in payroll.	No request is left pending.
6	When someone leaves, use Mark left. They stay on past payrolls.	Former staff are not paid next month.

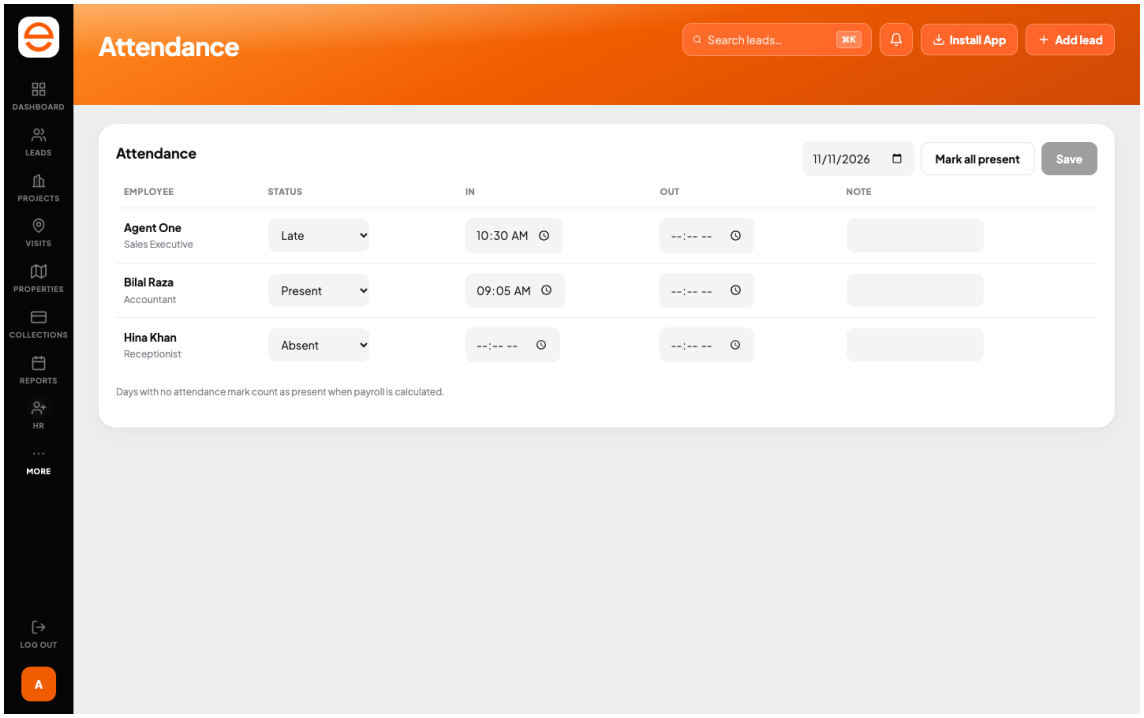

Screen: HR overview.

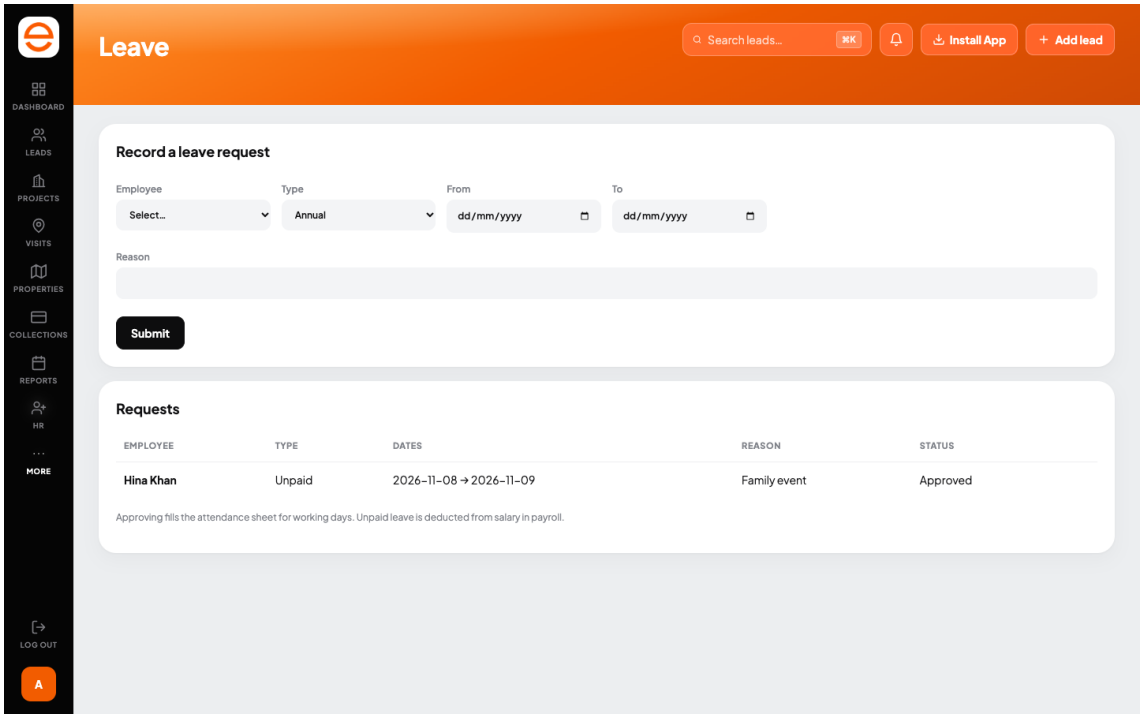

Screen: Employees: pay type and monthly salary per person.

Screen: New employee form.

Screen: Daily attendance sheet.

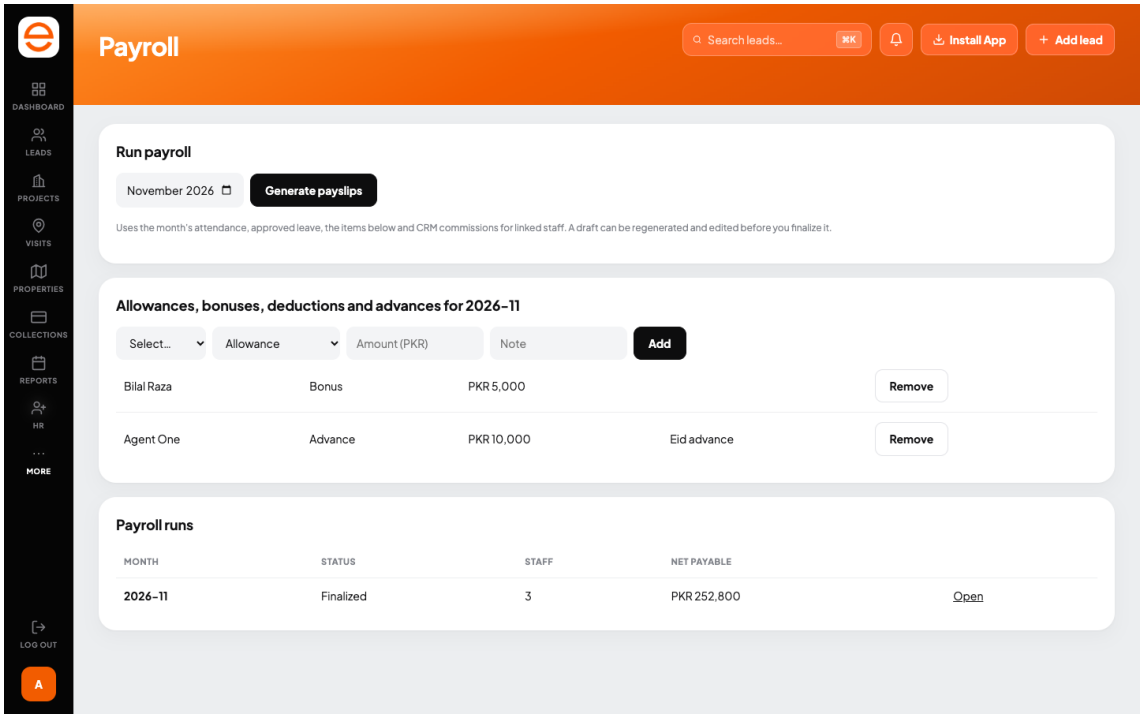

Screen: Leave requests and approvals.

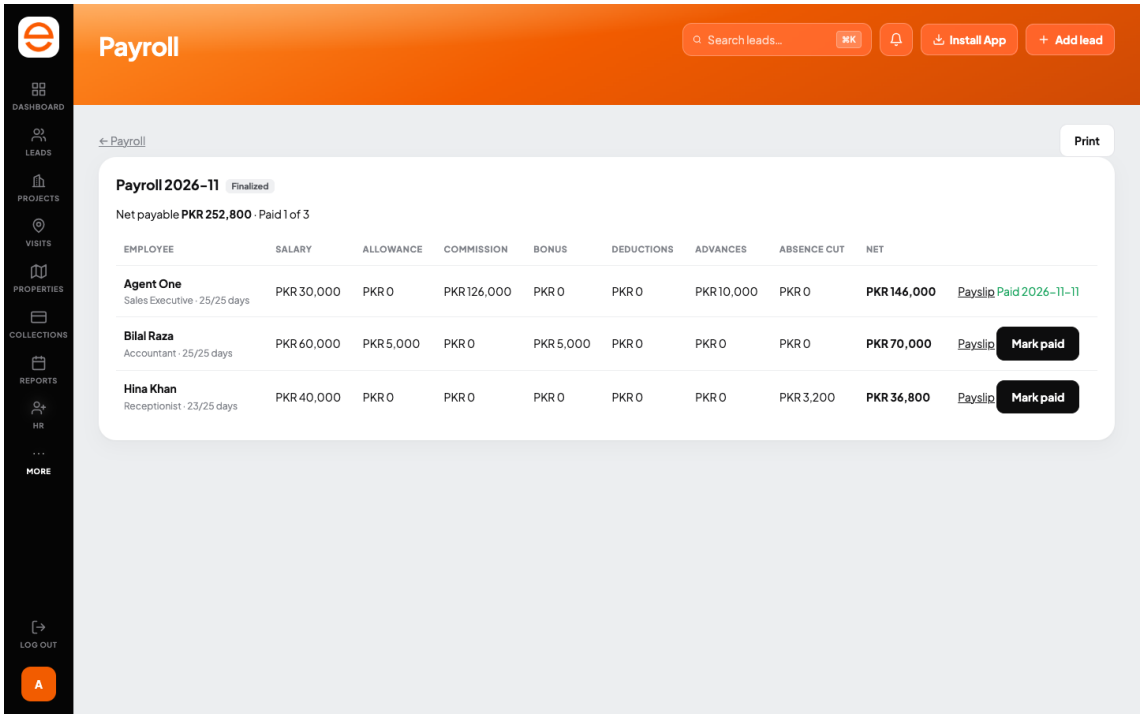

18. Run payroll, pay staff and print payslips

Step	Action	Check before moving on
1	Open Payroll. Add this month's one-off items: allowances, bonuses, deductions and advance recoveries.	Items are listed for the month.

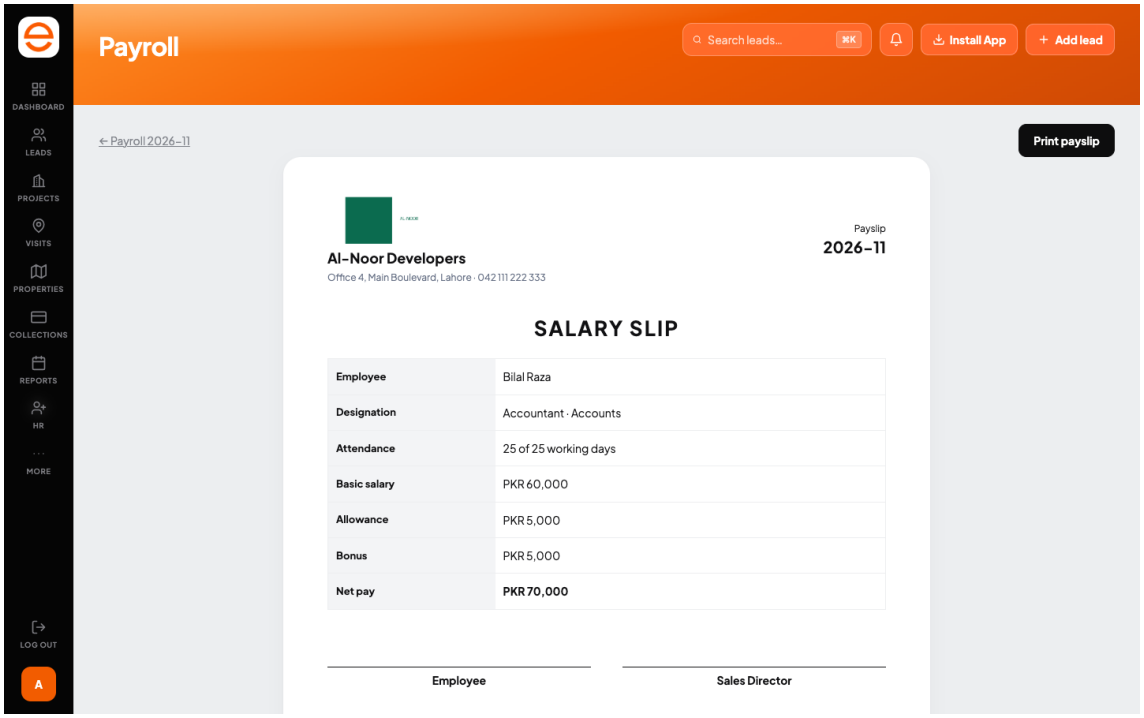

Step	Action	Check before moving on
2	Pick the month and choose Generate payslips. Pay = salary + allowance + CRM commission + bonus - deductions - advances - absence cut. The absence cut is salary divided by working days (Sundays are off) for each absent or unpaid-leave day, half for a half day. Days with no attendance mark count as present.	Each payslip total makes sense.
3	Review the draft. Edit any figure in the table, or Regenerate after fixing attendance. A draft can be deleted.	Numbers are final.
4	Choose Finalize. The payroll locks and no figure can change.	Status shows Finalized.
5	Mark each employee paid with the method and date, and open Payslip to print it on your company letterhead (see Settings > Letterhead & receipts).	Everyone shows Paid.

Screen: Payroll: one-off items and past runs.

Screen: A finalized payroll with commission, advances, absence cut and net pay.

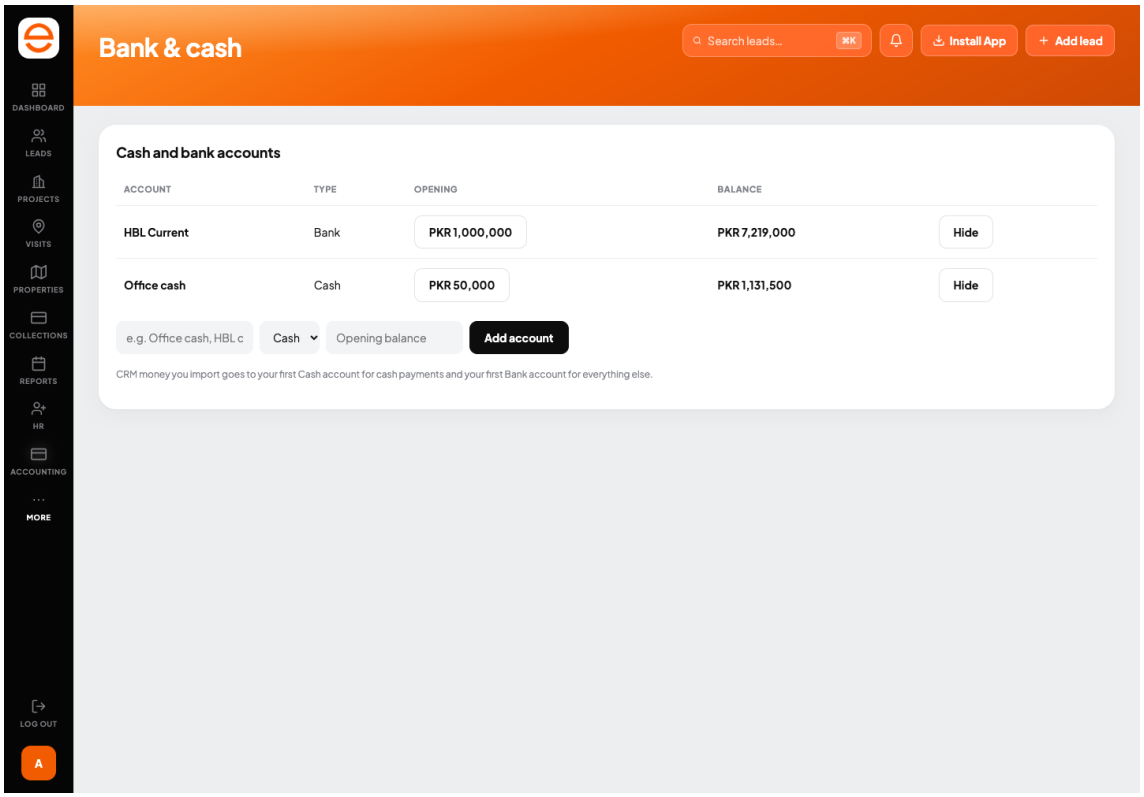

Screen: Printable payslip with the company letterhead.

Step-by-step: Accounting (optional module)

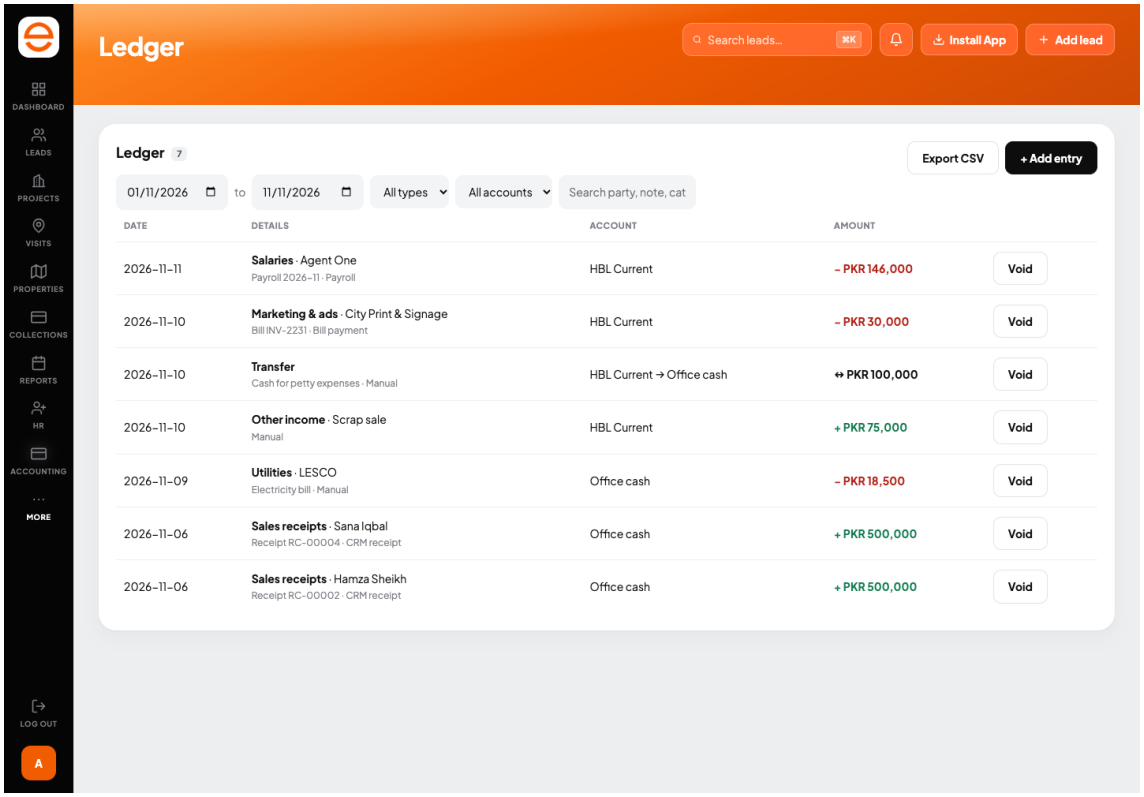

A simple, accurate set of books for cash, bank, expenses and vendors. The platform owner switches the Accounting module on; roles with the accounting permission (accounts, admin, owner) then see Accounting in the menu.

19. Set up accounts and keep the ledger

Step	Action	Check before moving on
1	Open Accounting > Bank & cash and add every cash box and bank account with its opening balance.	Balances match your real cash and bank.
2	Open Ledger > Add entry. Choose Expense, Income or Transfer, then the date, amount, account, category and who was paid or received from.	Entry appears in the ledger.
3	Use Transfer to move money between accounts, for example bank to office cash. It changes balances but is not income or expense.	Both balances move.
4	Wrong entry? Use Void and give a reason. Entries are never deleted, so the history stays auditable.	Voided rows are struck through.
5	On Accounting, choose Import CRM receipts, rent, commissions and payroll. Sale and rent receipts, refunds, paid commissions and paid payroll are copied into the ledger once; running it again adds nothing twice.	CRM money shows with its source.
6	Filter the ledger by date, type, account or search text, and Export CSV for your accountant.	The export opens in Excel.

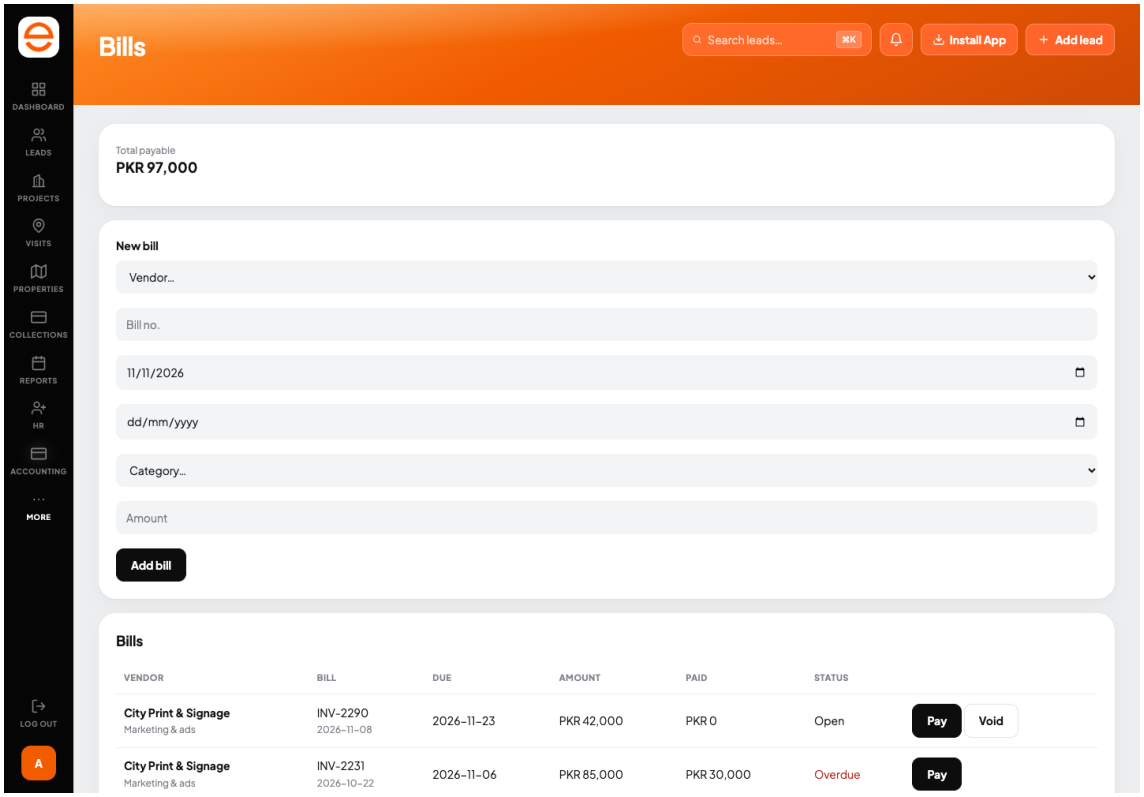

Screen: Bank & cash: accounts with opening and current balance.

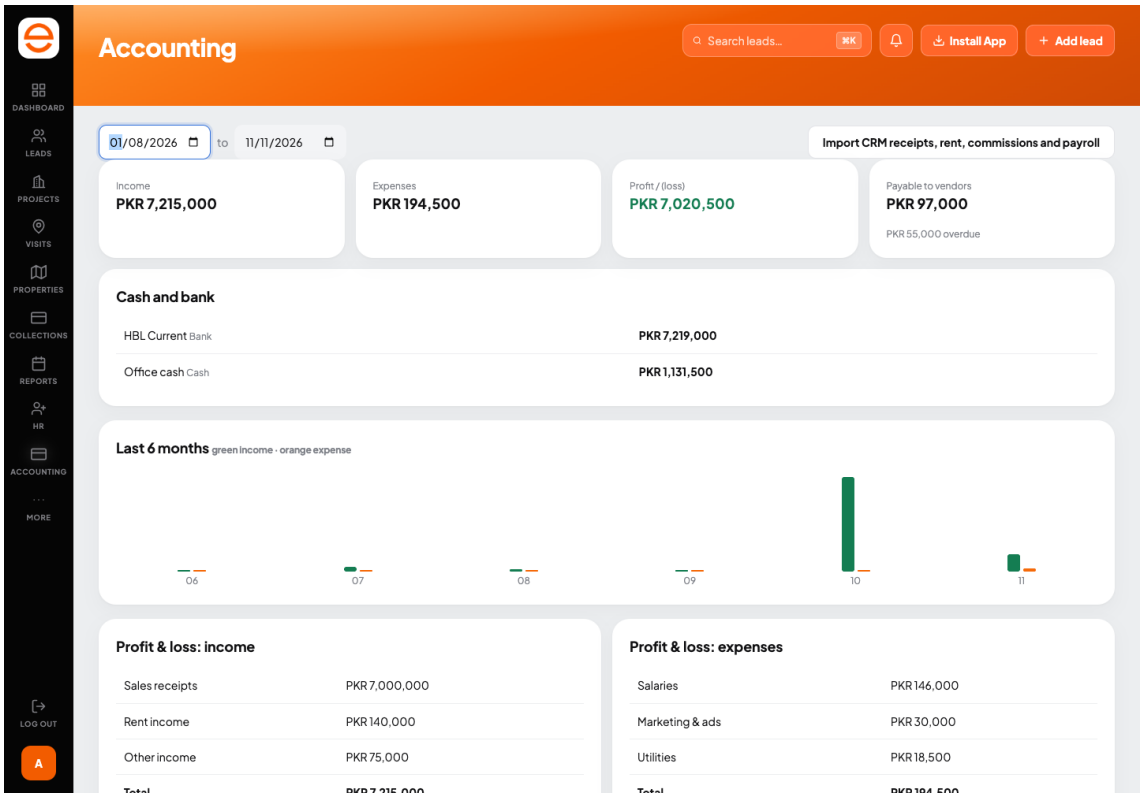

Screen: Ledger: income, expense and transfers with their source.

20. Vendor bills and reports

Step	Action	Check before moving on
1	Open Bills, add the vendor, then New bill with bill number, bill and due dates, category and amount.	Bill is listed as Open.
2	Choose Pay on a bill, enter the amount, date and the account you paid from. Part payments are fine. You cannot pay more than the balance.	Status becomes Partial or Paid.
3	Bills past their due date and not fully paid show as Overdue; the total payable is shown at the top of Bills and on the overview.	Overdue bills are chased.
4	Open Accounting for the period you need: income, expenses, profit or loss, the last six months, cash and bank balances and what you owe vendors.	Report dates are correct.

Screen: Bills: vendor, due date, paid, status and Pay.

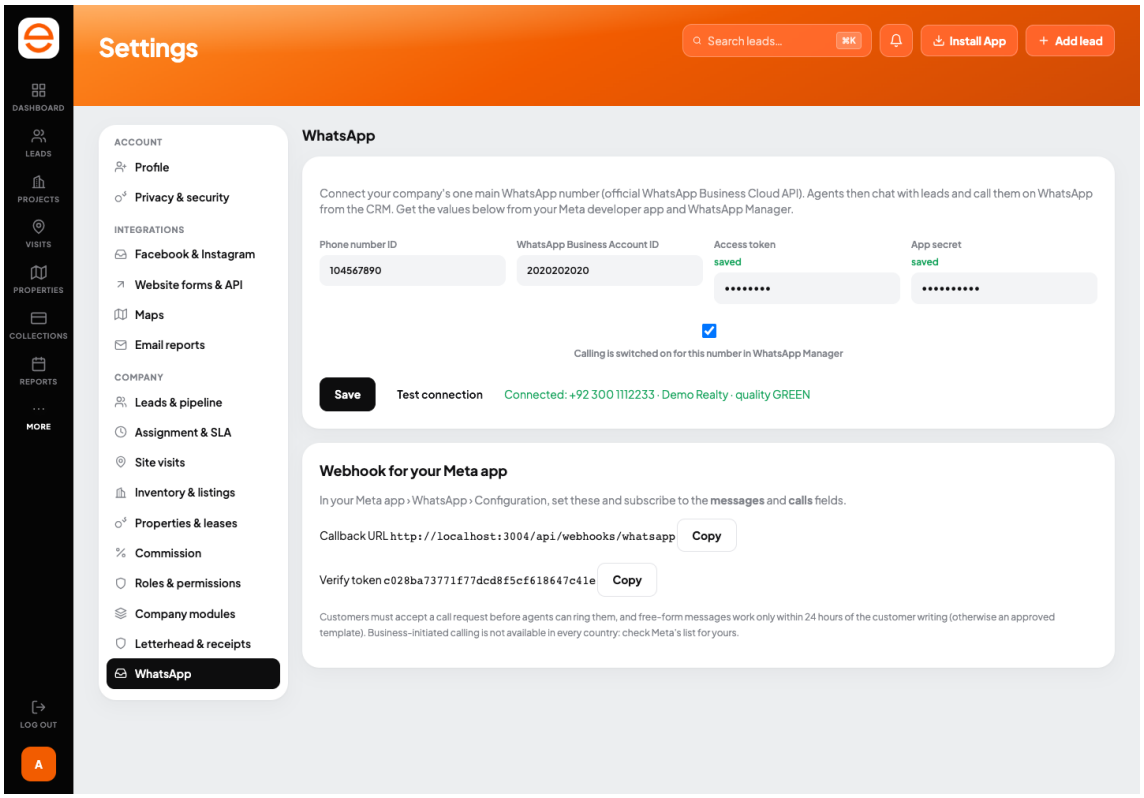

Screen: Overview: profit and loss by category, balances and payables.

Step-by-step: WhatsApp inbox and calling

Your company's one main WhatsApp number is connected once by an admin. Agents then message and call customers on WhatsApp from the CRM, and every conversation and call is saved on the lead.

21. Connect the number (admin, once)

Step	Action	Check before moving on
1	Create a Meta developer app with the WhatsApp product, add your business number, and note the Phone number ID and WhatsApp Business Account ID from WhatsApp Manager. Create a permanent access token for a system user.	You have the IDs and token.
2	Open Settings > WhatsApp. Enter the Phone number ID, Business Account ID, access token and the app secret. Tick Calling if it is switched on for the number in WhatsApp Manager. Save, then press Test connection.	It shows Connected with your number.
3	In your Meta app > WhatsApp > Configuration, paste the Callback URL and Verify token shown on the page and subscribe to the messages and calls fields.	Meta accepts the webhook.

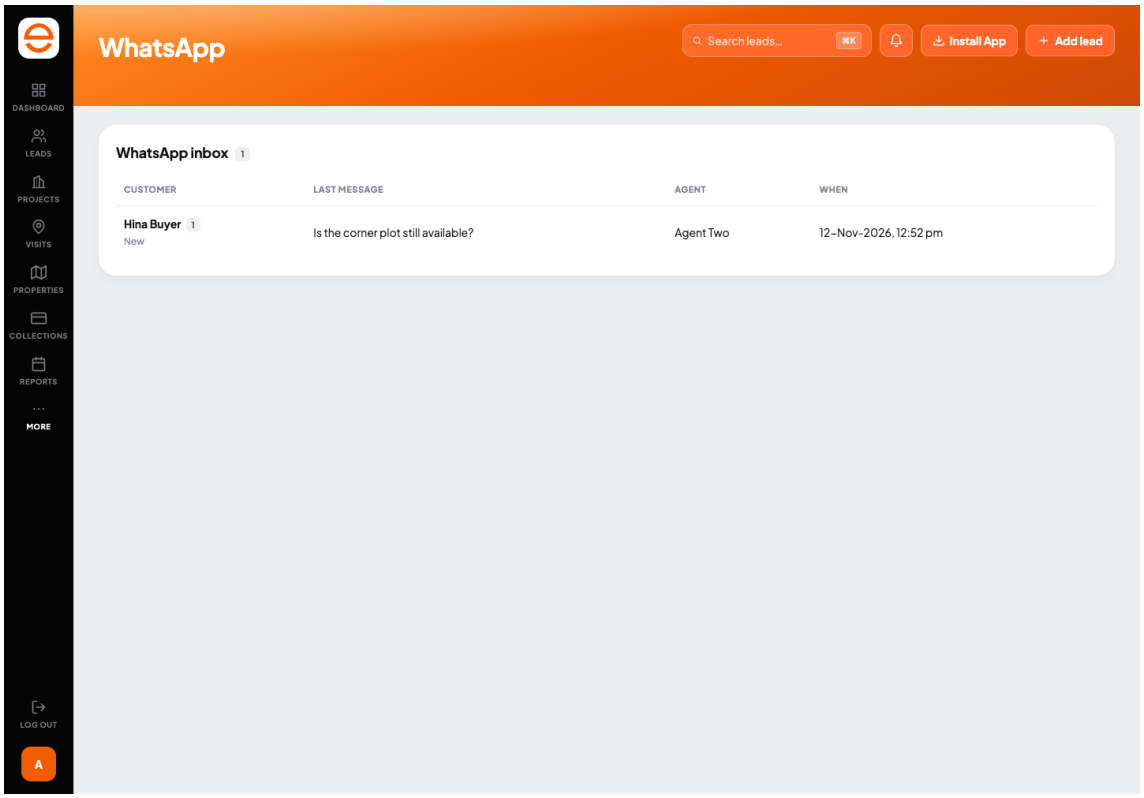

Screen: Settings > WhatsApp: connection details, test and the webhook values for Meta.

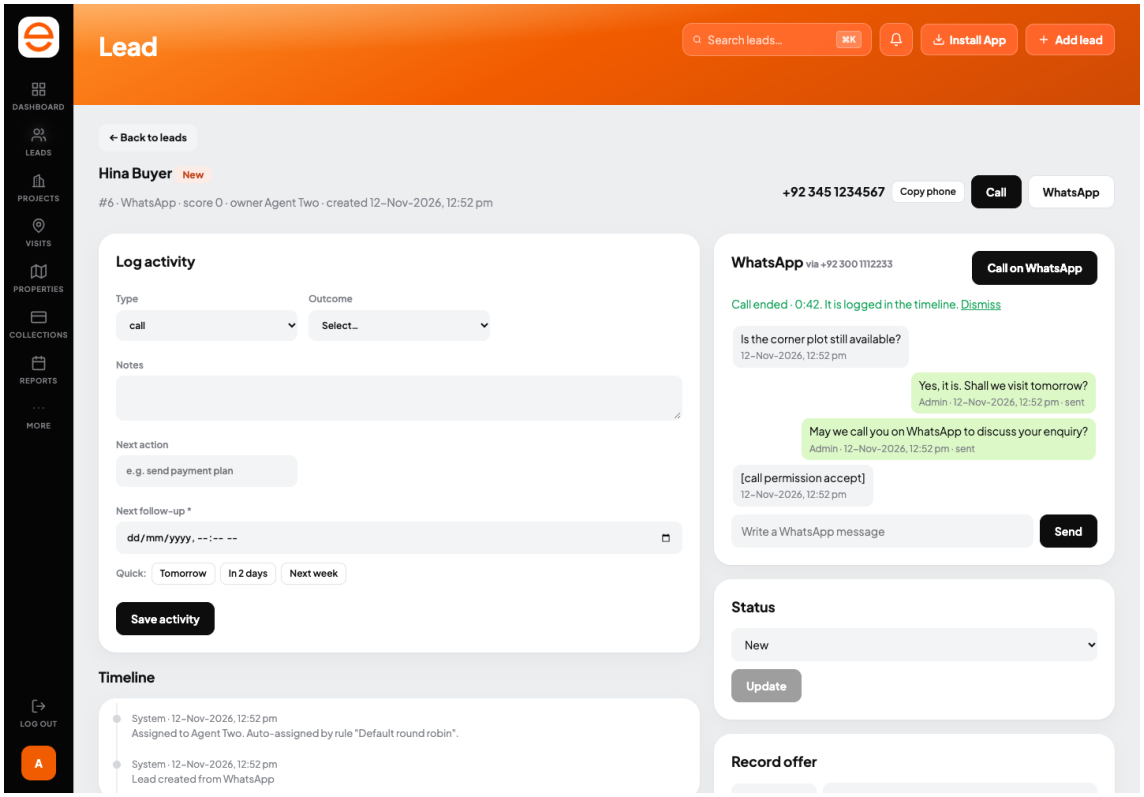

22. Chat and call customers (agents)

Step	Action	Check before moving on
1	Customers who message your number appear in the WhatsApp inbox and on their lead (a new lead is created and assigned if they are new). Unread conversations show a count.	Every new message is answered.

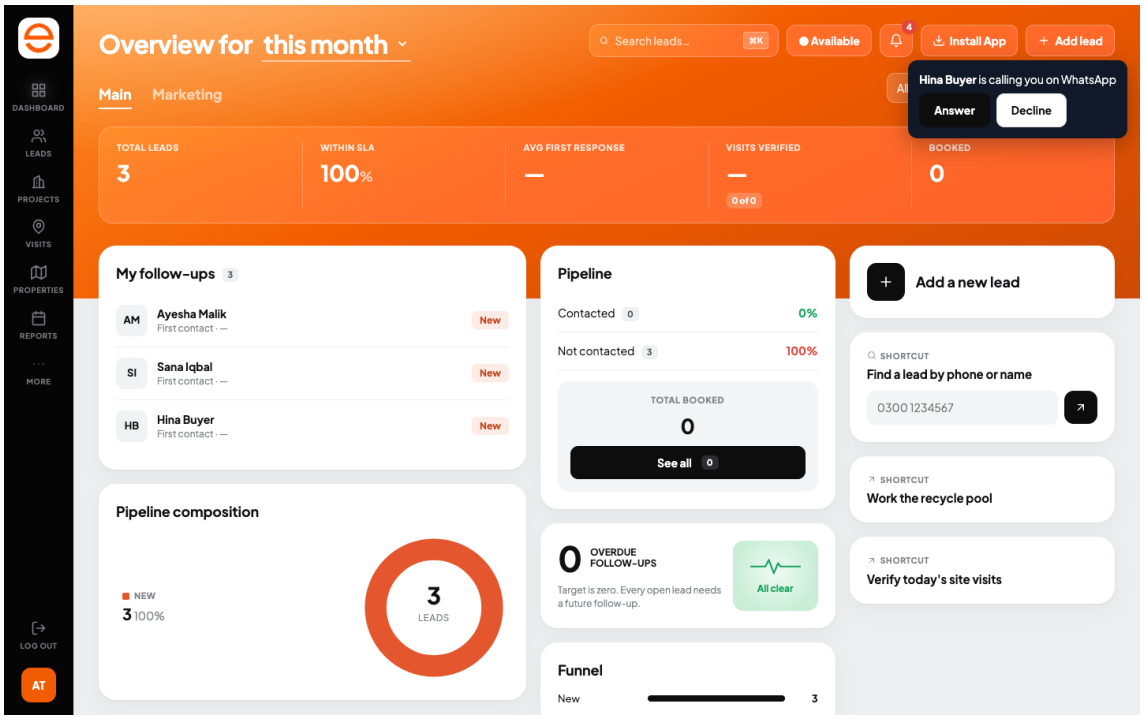

Step	Action	Check before moving on
2	Open the lead. In the WhatsApp card read the thread and reply. Free-form replies work within 24 hours of the customer's last message; after that choose an approved template.	The reply shows as sent, then delivered or read.
3	To call, press Ask permission to call. The customer gets a request in WhatsApp and must accept. This is a WhatsApp rule and works only while they have written in the last 24 hours.	The button changes to Call on WhatsApp once they accept.
4	Press Call on WhatsApp and allow the microphone. The call rings on the customer's WhatsApp; End call hangs up. Use Chrome, Edge or Safari over https.	The timer runs while connected.
5	When the call ends it is added to the lead timeline with its length. Then log the outcome and set the next follow-up as usual.	The lead has a next action.
6	When a customer calls your WhatsApp number, a banner appears on any page for the lead's agent: press Answer (allow the microphone) or Decline. If nobody answers within 45 seconds it is logged as a missed call and the agent is notified.	Missed calls are called back.
7	If an admin switched on Record calls, the call is recorded in your browser and saved when it ends. Play it later from Calls on the lead. Tell customers calls may be recorded.	Recording shows on the lead.

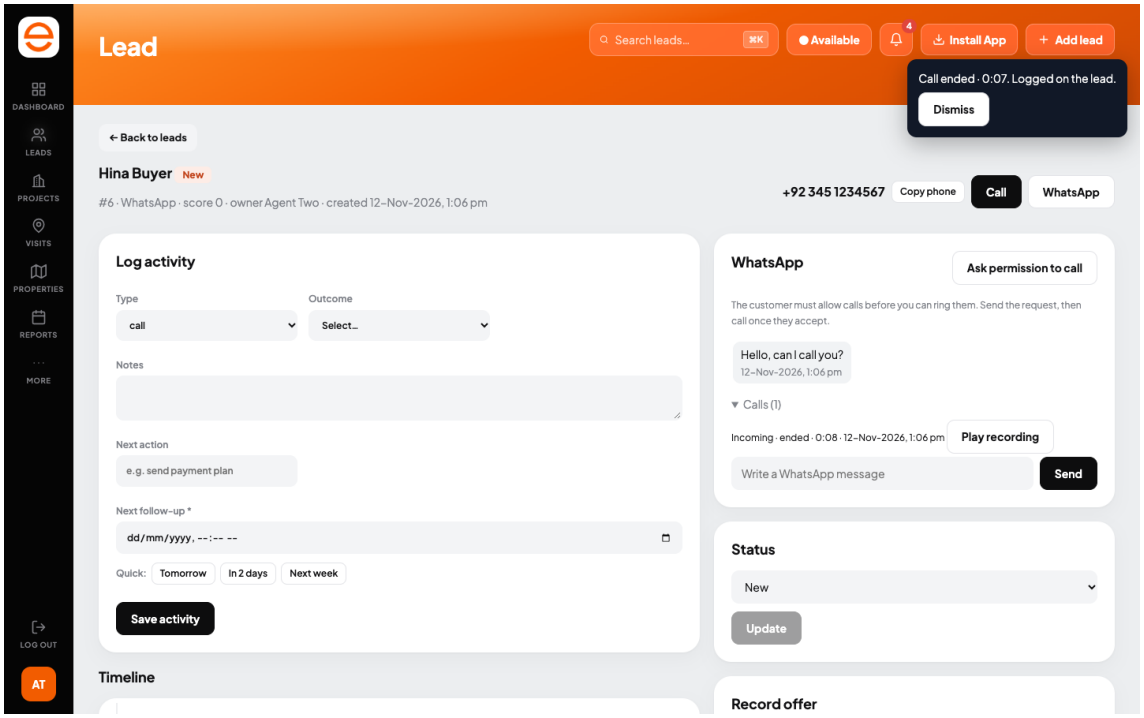

Screen: WhatsApp inbox: one row per conversation.

Screen: Lead page: thread, call controls and the logged call.

Screen: A customer calling in: Answer or Decline from any page.

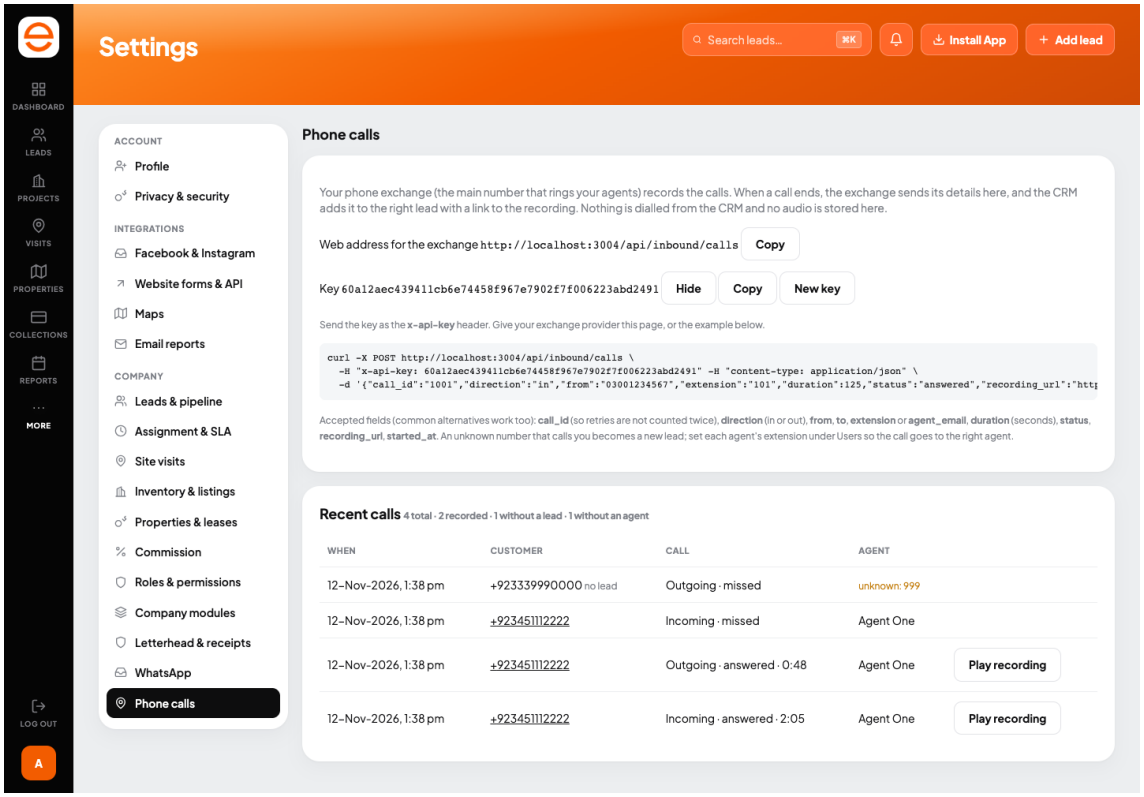

Screen: Calls list on the lead, with a recording to play back.

Step-by-step: phone calls and recordings from your exchange

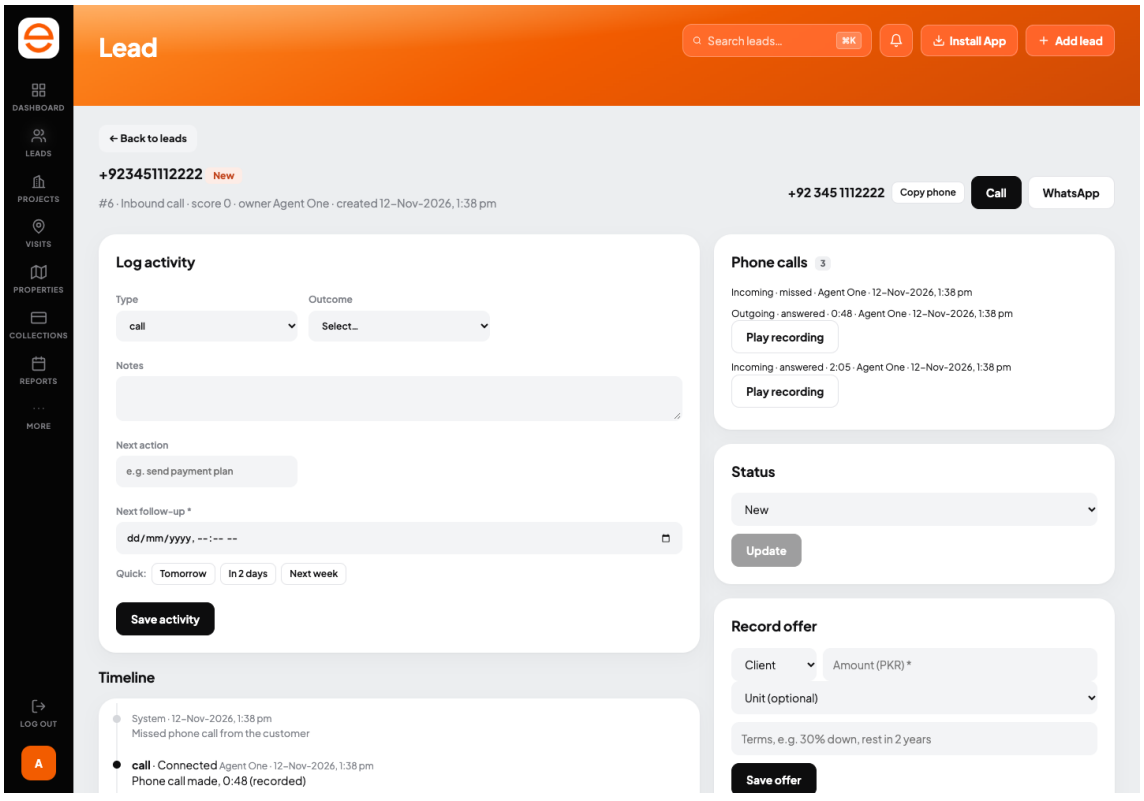

If your main number is a phone exchange or cloud PBX that rings the agents and records calls, the CRM can show every call and its recording on the lead. The exchange records; the CRM only keeps the call details and a link.

23. Connect the exchange and use call history

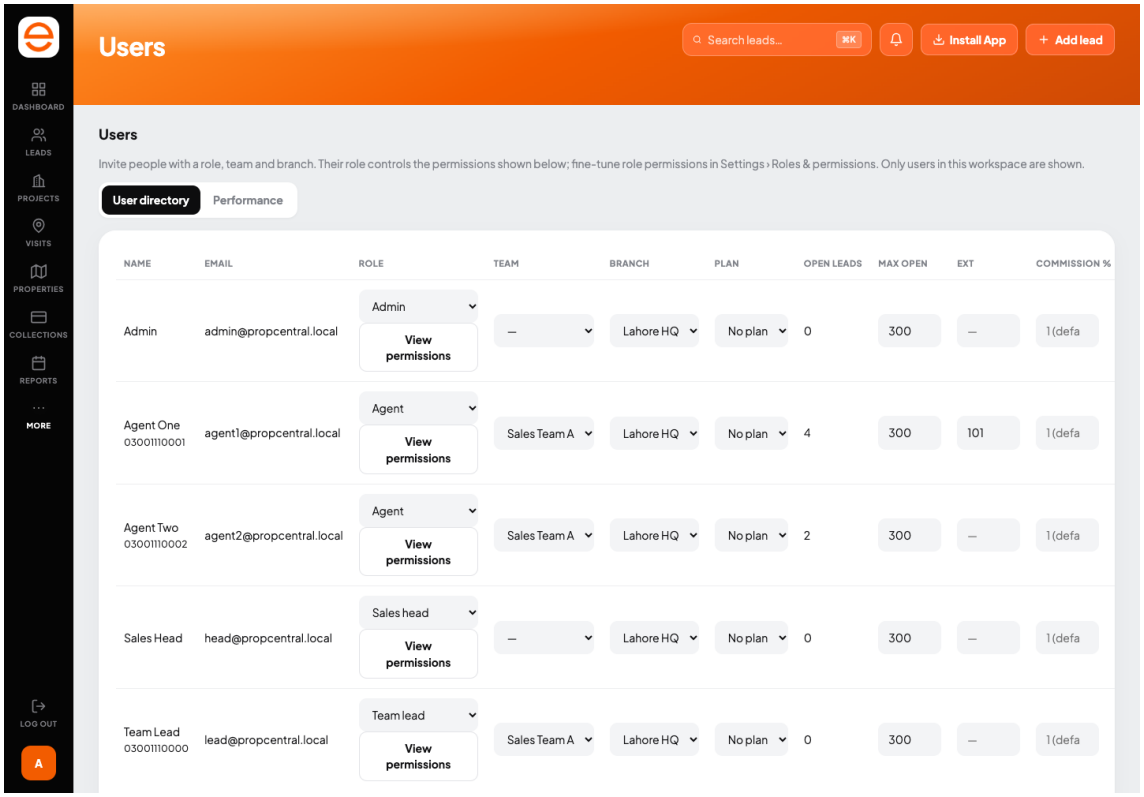

Step	Action	Check before moving on
1	Ask your exchange provider (Jazz, Zong, Ufone, 3CX, FreePBX or other) two things: is call recording on our plan, and can the system send call details to a web address when a call ends (a webhook) or give a list through an API.	You know what the exchange can send.
2	Open Settings > Phone calls. Copy the web address and the key and give them to the provider or your IT person. The page also shows an example request and the fields accepted.	The exchange has the address and key.
3	Open Users and type each agent's extension in the Ext column, so calls go to the right agent. Agents are also matched by email or mobile number if the exchange sends those.	Every agent has an extension.
4	Make a test call. It appears under Recent calls in Settings > Phone calls and on the customer's lead in the Phone calls card, with Play recording if the exchange sent a link.	The test call is on the lead.
5	Day to day: an unknown number that phones in becomes a lead assigned to the agent who answered. Missed calls notify the lead's owner. Calls you dial from the exchange appear on the lead too.	Missed calls are returned.
6	If a call shows "unknown" agent, add or fix that extension in Users. If a recording will not play, open it with the Open link: some exchanges need a login or expire links.	Calls and recordings are linked.

Screen: Settings > Phone calls: web address, key and recent calls.

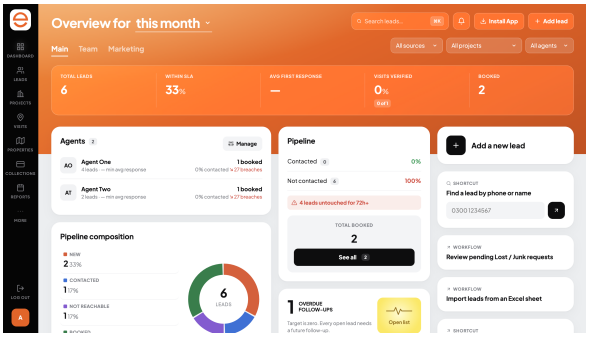

Screen: Lead page: calls from the exchange with a recording player.

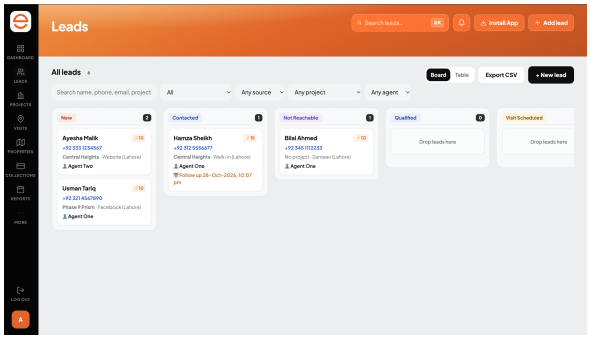

Screen: Users: the Ext column maps calls to agents.

Screen tour

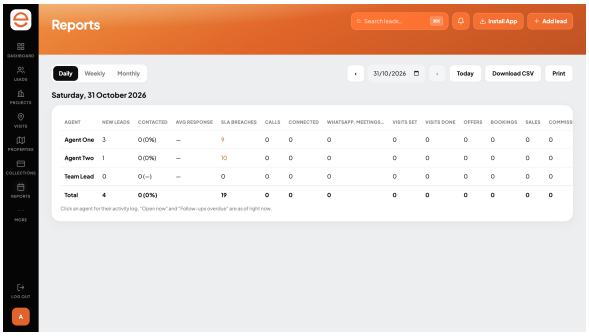

These screens show where the main workflows live. Your workspace may show additional modules depending on your role, plan, and enabled products.

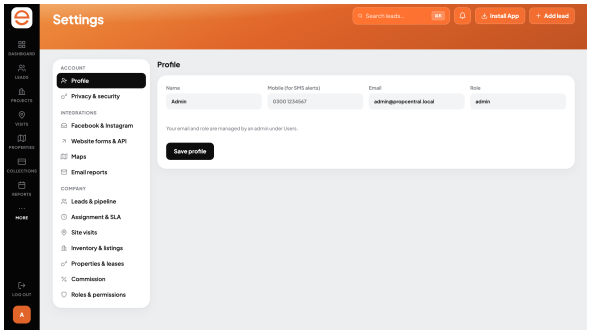

Dashboard: start here for KPIs, pipeline, agent activity, and overdue work.

Leads: manage the pipeline, search, filters, imports, and exports.

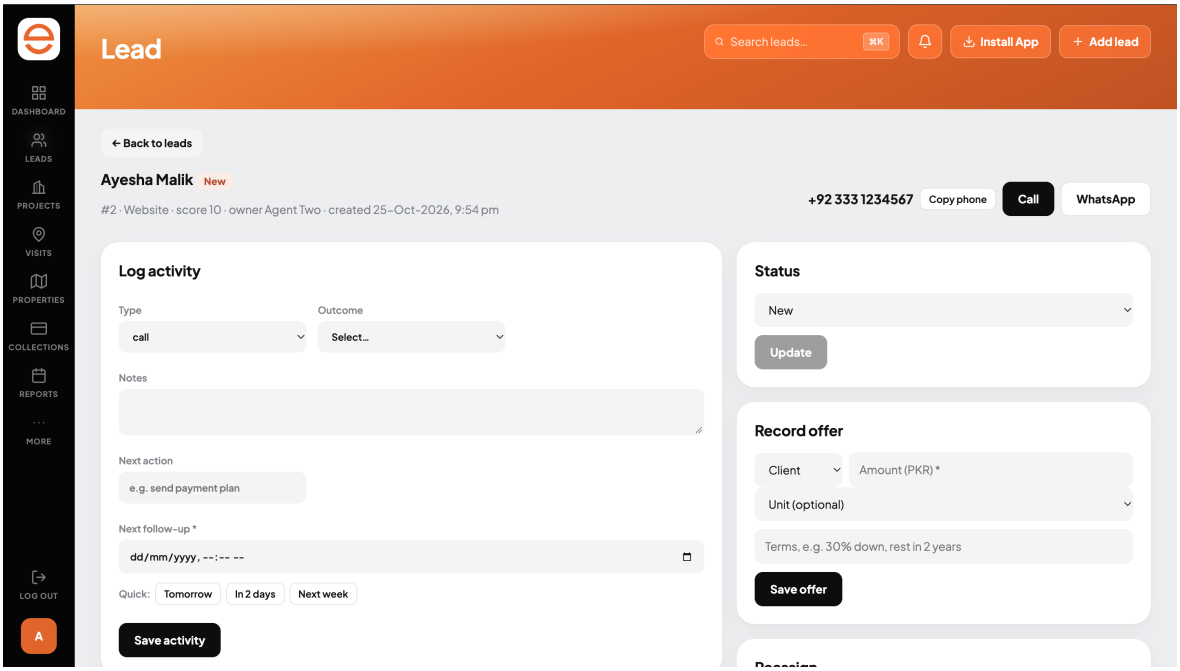

Reports: review daily, weekly, and monthly team performance.

Settings: configure profile, integrations, maps, roles, and permissions.

Screen tour: lead detail

The lead detail page is the source of truth for customer history and next actions.

Lead detail example: log activity, update status, set the next action, and keep the record owner and customer contact visible.

Tip: when handing a lead to another teammate, leave a clear note explaining the customer need, last conversation, promised follow-up, and any documents still needed.

Module-by-module guide

Use this section as the practical training path. Open the module shown in the left navigation, complete the action, and save the record before moving on.

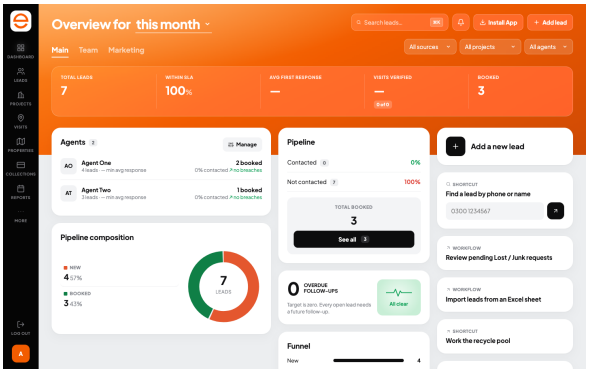

Module	What the user does	Main result
Dashboard	Review KPIs, overdue work, pipeline, and team activity	Know what needs attention today
Leads / Lead detail	Create, qualify, assign, contact, and schedule next action	Every opportunity has an owner and next step
Projects / Inventory	Maintain projects, phases, blocks, units, pricing, holds, and bookings	Availability and booking status stay current
Properties / Maps	Draw boundaries, upload overlays, place properties, and manage leases	Map and property records remain aligned
Visits	Schedule, check in, record feedback, and close the visit	Visits become measurable sales activity
Collections / Payments	Record receipts, installments, rent, refunds, and owner payouts	Financial history is auditable
Reports	Filter daily, weekly, or monthly performance and export approved reports	Managers can act on reliable numbers
Users / Settings	Invite users, set roles, permissions, integrations, and security	Access follows the company structure

Screenshot note

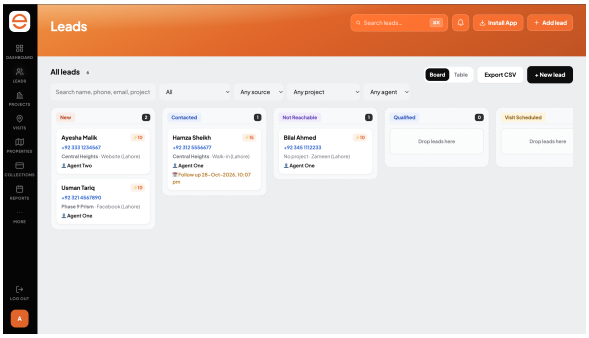

Screens are captured from the current Estate Centric interface. Menu visibility depends on the account modules and role; a user may see fewer modules than the full manual.

Module screens: property CRM

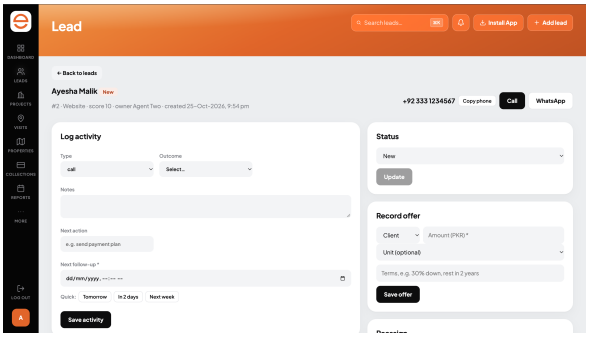

These screens cover the core real-estate workflow from daily overview through map and administration.

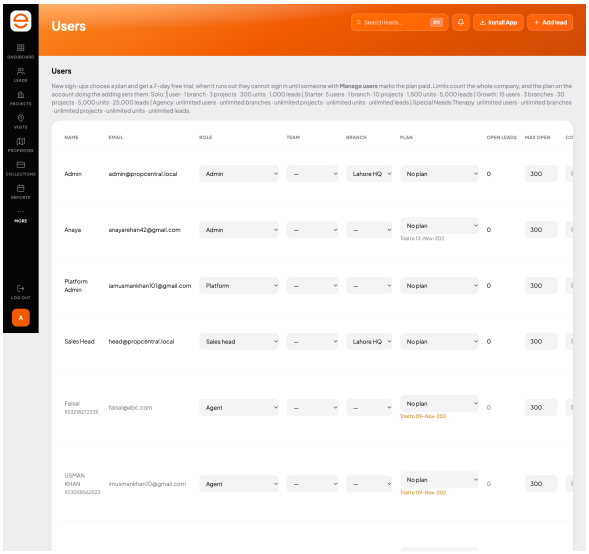

Dashboard: review the daily pulse, overdue items, funnel, and agent activity.

Leads: filter the pipeline, update status, and open a lead record.

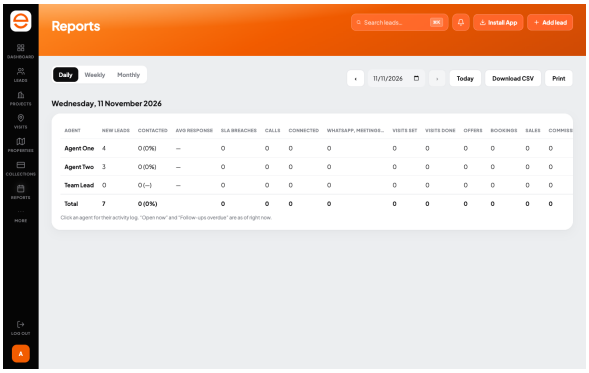

Lead detail: record calls, notes, status, offer information, and the next action.

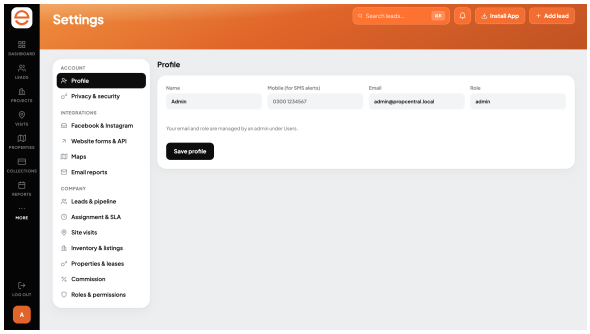

Users: assign roles, teams, branches, plans, and account access.

Module screens: operations and management

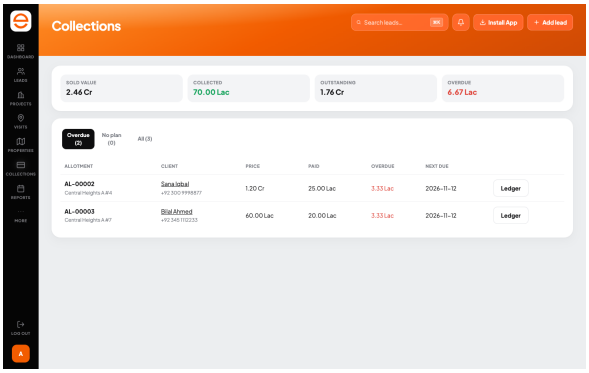

Managers use these screens to monitor performance, configure access, and keep the workspace safe.

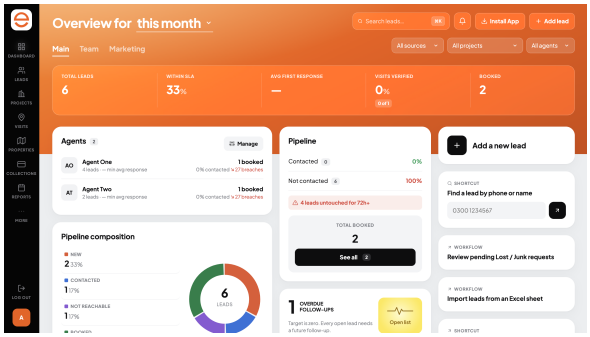

Reports: switch daily/weekly/monthly views, review team rows, and use approved export/print actions.

Settings: configure profile, integrations, maps, permissions, and system rules.

Collections reference: confirm receipt workflow and balance collection before closing a financial item.

Management dashboard: use KPIs to choose the next coaching or follow-up action.

For Properties, Projects, Visits, and Collections, use the step-by-step instructions in the next chapters. These modules are permission-gated, so the exact menu appears only when enabled for the account.

2. Navigation and permissions

The left navigation changes according to your enabled modules and permissions.

Area	Use it for
Dashboard	KPI summary, funnel, response time, sources, agents, visits, and overdue work
Leads	Board/table pipeline, search, assignments, activities, imports, and exports
Properties	Societies, boundaries, rental properties, leases, rent, maintenance, and owner statements
Projects / inventory	Projects, phases, blocks, units, pricing, holds, allotments, and map inventory
Visits	Schedule, check-in, customer OTP, feedback, and unverified visits
Reports	Agent performance, sales, collections, commissions, and print/CSV output
Settings	Company rules, integrations, maps, roles, permissions, reports, and security

Role model

- **Role:** controls lead visibility and available actions. Common roles include Agent, Team lead, Branch manager, Sales head, Owner, and Admin.

- **Team and branch:** refine assignment and reporting scope. Keep them accurate so routing and reports remain reliable.

- **Permission matrix:** administrators can decide which roles may import, export, manage users, edit inventory, approve lost leads, manage payments, and change settings.

If you cannot see a menu item or button, it is usually a permission, module, plan, or account-scope setting - not a browser problem.

3. Leads: the daily operating workflow

Leads are the center of the CRM. Keep the record complete so the next person can understand the customer and take action.

Create and qualify a lead

- Select **Leads**, then choose **+ New lead**. Capture name, phone, source, project, budget, purpose, and any custom fields.

- Search before creating a duplicate. The CRM normalizes phone numbers and can attach repeat inquiries to an existing open lead.

- Assign the lead to the correct agent or let the assignment rules route it by source, city, project, budget, team, branch, working hours, or load.

- Set a next follow-up date for every active lead. The SLA clock uses first-contact and follow-up activity to surface risk.

Lead status discipline

When this is true	Use this action
New inquiry received	Keep New and make the first contact
Conversation started	Log a call/note and move to Contacted
Customer is a fit	Move to Qualified and record needs/budget
Visit or meeting is agreed	Create a Visit with location and time
Offer or price discussion started	Record an Offer and keep next action current
No further opportunity	Use Lost/Junk with a reason; approvals may be required

Import and export

- Use **Import leads** for CSV/XLSX files. Start with a dry run to review duplicates, invalid rows, and fields before committing.

- Use CSV or XLSX export only when your role has permission. Export requests may require approval from a sales head or administrator.

- Protect downloaded files: they contain customer data and may be watermarked or audited.

4. Users, invites, roles, and permissions

Administrators should manage access through invitations and roles instead of sharing passwords.

Invite a user

- Open **Users** and choose **Invite user** / **Create account**. Enter name, email, phone, role, team, and branch.

- Leave the password blank to generate an invitation. The user receives a one-time setup link when email delivery is configured.

- If email is not configured, copy the generated invite link and send it through an approved channel. The link expires after 30 minutes and works once.

- Use **Invite link** on an existing user to generate a fresh setup link. Deactivated users must be activated first.

Assign the right access

Role	Typical use
Agent	Own leads, calls, visits, offers, and assigned follow-ups
Team lead	Team visibility, coaching, assignment support, and approvals available to the role
Branch manager	Branch-level visibility and operational reporting
Sales head / Owner	Company-wide sales oversight and approval workflows
Admin	Users, settings, permissions, integrations, and full workspace administration

Account isolation

Users, projects, properties, overlays, and other account-owned records are scoped to the workspace that created them. A user added under the main account inherits the company workspace and its enabled modules; unrelated accounts do not appear in the Users page.

Security rule: never send a password in a shared spreadsheet or chat. Use the one-time invite/reset link.

5. Projects, inventory, and maps

Use Projects for land/building inventory and Properties for managed real estate and map-based property work.

Project inventory workflow

- Create the project, then add phases, blocks, streets, units, pricing, categories, and premiums.

- Use the inventory map to view live unit status. Holds expire automatically according to your settings.

- When a booking is created, the unit status and lead status update together. Keep the customer ledger and allotment documents attached.

- Use media for brochures, floor plans, photos, and shareable project links.

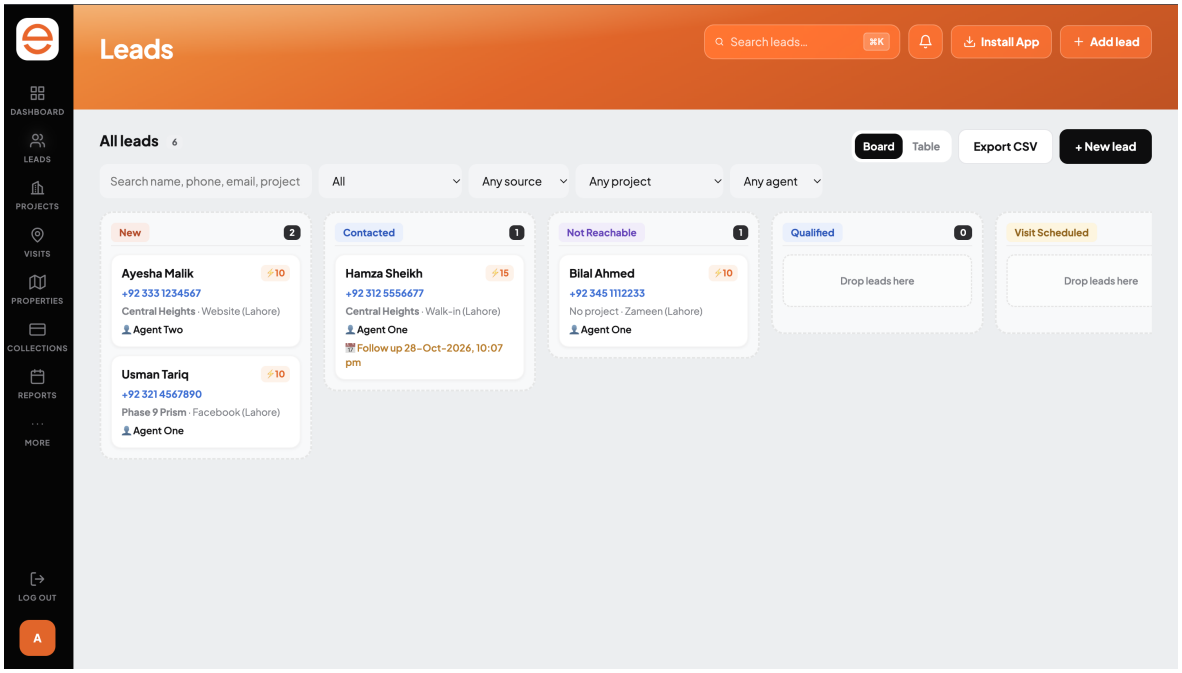

Society and property map workflow

- Open **Properties -> Societies** and draw or edit the society/phase/block boundary.

- Click the map to add a property pin. The CRM determines the containing society/phase/block when the point falls inside a boundary.

- Upload a plan image, remove white background when needed, adjust opacity, fit the map, match points, and redraw boundaries when the outline is incorrect.

- Click the uploaded map to open the overlay controls. Use Hide map, Reset position, Fit entire map, Redraw boundary, and Delete carefully.

Example interface view - the Leads board shows status columns, filters, search, and export controls.

6. Properties, collections, and reports

The property and collections tools keep ownership, leases, rent, payments, and sales performance together.

Managed property workflow

- Create or select a society, then add the property from the map with owner and tenant details.

- Create the lease with rent, deposit, dates, yearly increase, police registration, and agreement number.

- Review rent schedule and overdue items from the property or Collections area. Record receipts, refunds, maintenance, and owner payouts.

- Use status colours on the map to identify vacant, let, ending, or overdue properties.

Reports

Report	Best used for
Dashboard	Daily pulse: funnel, SLA, source, agent, visit, and overdue indicators
Agent report	Daily/weekly/monthly productivity, response time, calls, visits, bookings, sales, and commission
Collections	Overdue rent, installment plans, receipts, payments, refunds, and transfers
Commissions	Pending, paid, cancelled, dealer balances, and agent targets
Weekly email report	Management summary; configure in Settings when email delivery is connected

7. Integrations and data capture

Connect the channels your team already uses, then confirm every inbound record is visible in the CRM.

Facebook and Instagram leads

- Open **Settings -> Facebook & Instagram** and enter the Meta app details, verification token, app secret, and Page token as configured by your administrator.

- Confirm the webhook callback and test delivery. Campaign, ad set, and ad identifiers are stored with the lead when provided by Meta.

- Review recent deliveries in Settings. A rejected lead should show a reason rather than failing silently.

Website and inbound API

- Use Settings -> Website forms & API for the inbound endpoint and API key.

- Send a name plus at least one contact method, then include source, campaign, project, budget, and notes when available.

- Treat inbound keys like passwords. Rotate them if they are exposed.

Email and SMS expectations

Some installations use console stubs until an SMTP/email API or local SMS gateway is connected. If an invite link is generated but email is not marked as sent, copy the link and deliver it manually while the integration is being configured.

8. Security, backups, and troubleshooting

Good data hygiene protects customer information and prevents operational confusion.

Security checklist

- Use a unique password with at least 10 characters and letters plus numbers.
- Enable two-factor login from your security settings. Administrators can reset 2FA for a user who loses access.
- Deactivate offboarded users promptly. Their sessions end and open leads can be reassigned.
- Do not share exports, invite links, API keys, customer CNICs, or portal links outside approved channels.
- Keep regular backups of your workspace data and restrict backup downloads to administrators.

Common problems

Problem	What to check
Cannot see a lead or property	Role scope, branch/team, account, active status, and module permissions
Invite email did not arrive	Email integration, spam folder, correct address; copy the one-time link from Users
Map overlay looks cut or misaligned	Fit entire map, reset position, opacity, white-background option, match points, redraw boundary
3D or map view does not load	Browser refresh, MapTiler key, deployment API health, and browser console/network errors
Import rejects rows	Run dry-run first; correct required fields, phone format, duplicate rows, and headers
User sees the wrong role	Refresh session, check Users role dropdown, verify account owner, and log in again

Deployment check

Administrators can check **/api/health** after deployment. A healthy response confirms the API and database connection. If the response is a 500, inspect the deployment environment variables and database credentials before changing application data.

Appendix: recommended operating rhythm

Frequency	Team habit
Every morning	Review dashboard, overdue follow-ups, new leads, visits, and assignments
After every contact	Log the activity, result, next action, and next action date
Before a visit	Confirm location, customer phone, assigned agent, and visit status
After an offer	Record amount, terms, documents, and the next decision date
At booking	Confirm unit status, allotment, payment plan, receipt, and customer documents
Every week	Review SLA breaches, source quality, agent response time, lost reasons, and collections
Every month	Review commissions, targets, branch performance, plan limits, users, and backups

Need help?

Contact your Estate Centric workspace administrator first. Include the page, user email, approximate time, and a screenshot of the issue. Never include passwords, API keys, or private customer documents in a support request.

Estate Centric - turning property conversations into accountable workflows.
